MY CREED

I would be true, for there are those who trust me;

I would be pure, for there are those that care.

I would be strong, for there is much to suffer;

I would be brave, for there is much to dare.

I would be friend to all — the foe, the friendless;

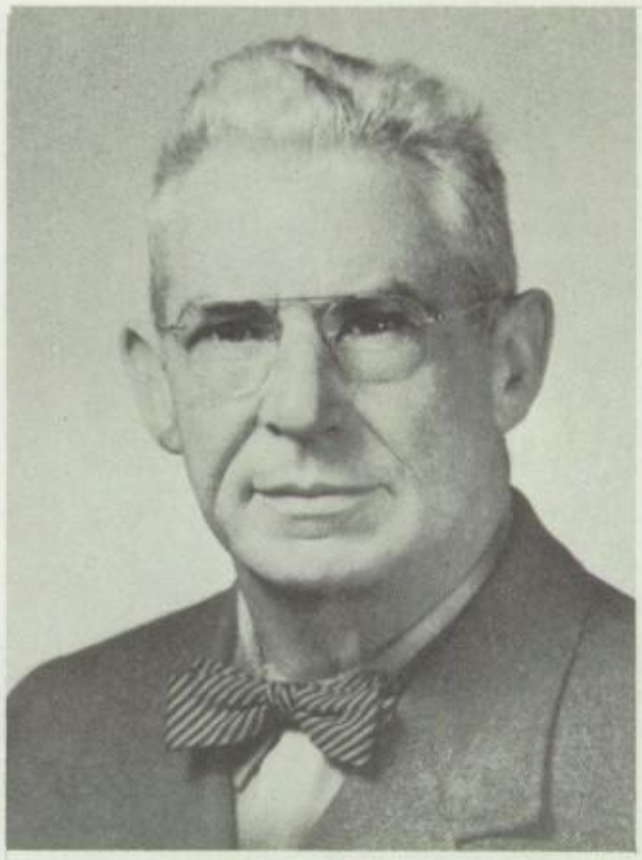
I would be giving, and forget the gift.

I would be humble, for I know my weakness;

I would look up — and laugh — and love — and lift.

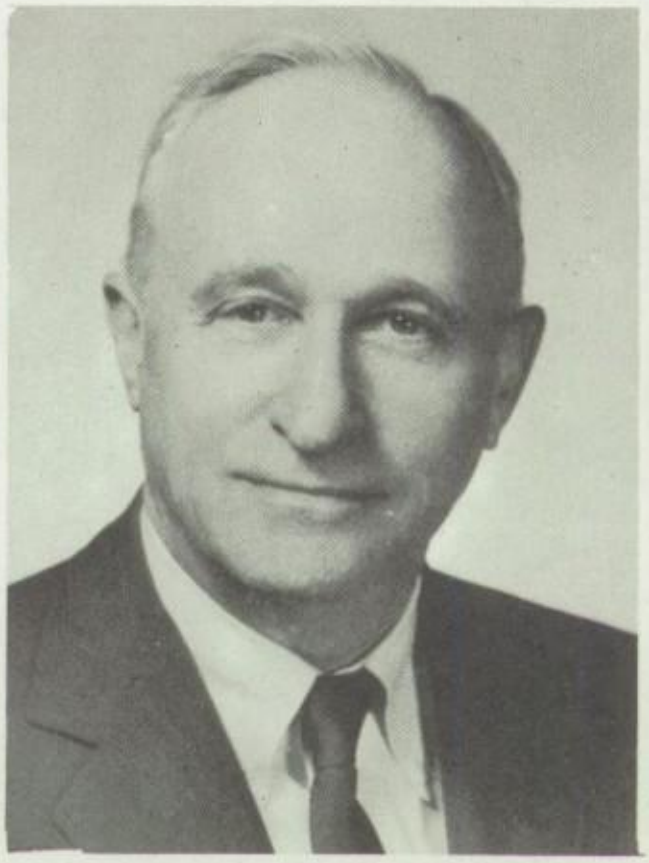
Howard Arnold Walter

DEDICATION



Mr. Pasquale DeNinno, B.S., M.Ed.

Mr. Arthur Green, A.B., M.A., M.Ed.



Mr. Elliot Gilfix, A.B., M.Ed.

Mr. Philip Mackey, A.B., M.Ed.

HEAD MASTER'S MESSAGE

It is always a pleasure to extend congratulations and best wishes to the graduates of the Boston Trade High School for Boys. Each year I feel especially proud in the realization that, once again, BTHS is sending into industry men of sound moral character, each with a substantial training in one of fourteen different trade areas.

To the parents of our graduates I extend my warmest thanks and congratulations for their untiring efforts in the interests of these young men. They, the parents, have sacrificed to make education and social training a real thing, and it is to these parents that I offer my hand.

We at Trade School have tried to prepare each pupil for his place in life. We believe we have done the job well, and are confident in the fact that the home and school cooperation will serve to provide each graduate with a suitable and profitable means of employment.

Vocational education is a most necessary part of a nation's educational program. At this school the best instructors and equipment are available, and the vocational training provided measures up to the most exacting standards demanded of secondary schools.

The class of 1963 has given the faculty and me great satisfaction, and, with confidence in our students, we anticipate successful careers for each and every boy.

So, farewell and good luck! May God go with you and guide you in all your endeavors. I know you will bring honor to your parents, your school, your country, and yourselves.

EDWARD TERRENZI

Head Master

Shop Superintendent

JAMES B. McDONOUGH,
Shop Superintendent

It is generally true that an educational program is only as good as a community wants it to be. Quality standards are set by understanding attitudes toward the value and outcomes of education. And attitudes are reflected not only by the budget provided for a program but by the measure of creativity and initiative that is stimulated in teachers and supervisors.

But there is one educational program that is managing to transcend the handicaps of meager budget and shortage of teachers and is blossoming into a substantial segment of American public vocational education

This is the intensive program of technical training being offered in hundreds of vocational technical high schools, technical institutes, junior colleges and municipal colleges around the country. This program of high skill technical training has been stimulated through government help.

We feel that here at B.T.H.S. we are cooperating in this effort. Students in the varied trades are being taught fundamental skills and techniques which will help them in their chosen life's work. Not only will these boys be able to step out into industry as apprentices but they will be able to continue their schooling even on a higher level. Our manpower needs will be met only through vocational technical training. We feel that here at the B.T.H.S. we are helping to solve this problem. Our graduates in the near future will help to fill these manpower gaps which sorely need the vocational technical trained worker.

Guidance Counselor

BENJAMIN WOLK
Guidance Counselor

A Picture to Paint

Your life ahead may be likened to the canvas of an artist who is about to paint his masterpiece. The artist has spent long hours in studying and improving the techniques and skills of his profession. You, too, have devoted much time in learning the skills of your trade. You have acquired proper work and social habits and are prepared for entry into the world of industry.

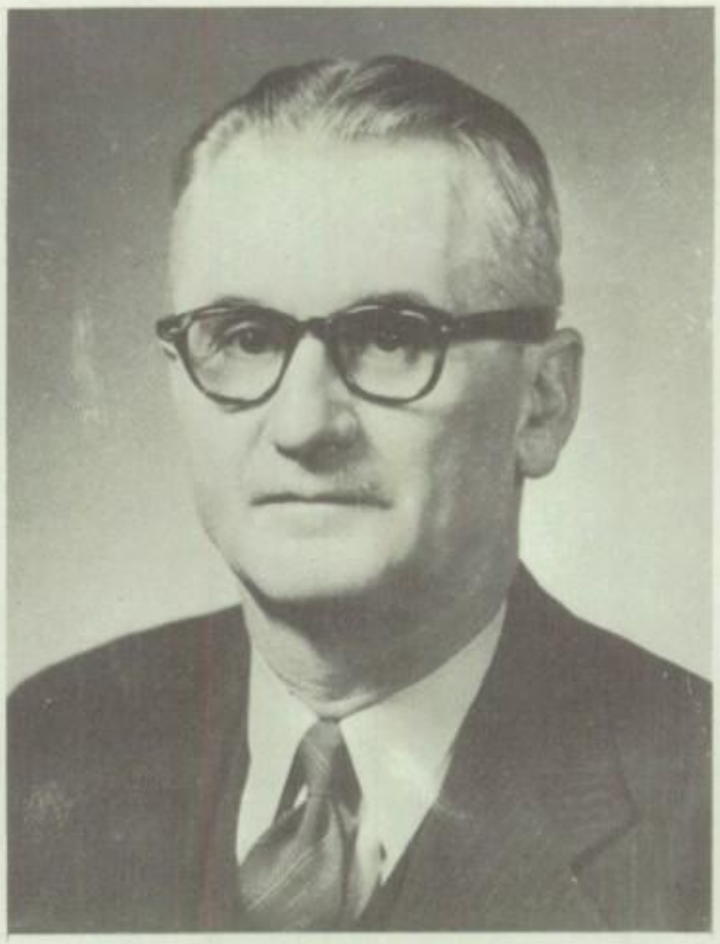
How will your picture of life turn out? Will you, like some artists who copy other pictures, simply go through life imitating others, or will you be independent and develop your own natural talents? Will you show others that you have a personality of your own and can stand on your own two feet as an imaginative, thinking person? Will your picture be dull and lifeless, or will it have color and meaning, reflecting interest in your fellow man and concern for your church, community, and your country?

Will your picture reflect resolution and determination, or wlll it show indifference and aimlessness? Like some individuals who lack purpose, will you wander from job to job not knowing what you truly want, or will you set high standards and endeavor to achieve the very best?

If your answers to these propositions are creditable, in the years to come, you will, look back upon your canvas of life with satisfaction, justifiably proud in the knowledge that you performed well and to the best of your ability.

The picture of life is yours to paint. Do it well and be proud of what you do.

Job Placement



FRANCIS J. HARRIGAN

In order to help graduates of the school to find satisfactory employment in the trade for which they have been trained, Mr. Francis J. Harrigan, a member of the faculty, has been handling the placement and follow up work, here, for a number of years. The program includes periodic visits to selected firms in the Boston area, seeking suitable employment opportunities. Annual surveys of the graduates, interviews with the parents and boys, and the keeping of alumni employment records are functions of our placement work.

Most boys need counsel and help with the problems of adjusting themselves to the change from school life to industrial and community life. Our placement staff helps them make the change. Many alumni assist in locating vacancies for our graduates to fill. This assistance is encouraged and sincerely appreciated. We hope that all the graduates will cooperate in the annual survey by returning information cards to the school. We expect that each graduate of the class of 1963 will be placed in his chosen field and will carry on the schools tradition of good workmanship and friendly human relations.

Faculty Retirement

EDWARD MULVANITY

This year marks the final chapter in the teaching career of Mr. Mulvanity, Head of our Machine Department. His career spans a total of thirty-nine years. It started at the Training School for Teachers of Mechanic Arts in South Boston in the early nineteen twenties and concludes here at the B.T.H.S. Mr. Mulvanity first came to our school on October 9, 1935. In October of 1946, he was assigned to Boston Technical High School as Acting Head of the Machine Dept. April of 1951 saw Mr. Mulvanity's return to B.T.H.S. as Division Head of the Machine Dept. In our chronology we must remember to mention that Mr. Mulvanity received his B. Ed. from Boston College in 1937 and his Master's in Education from Boston Teachers College in 1944.

Mr. Mulvanity's career has been long and fruitful. He has guided thousands of boys in school and helped to give them knowledge and skill in machine work so that they might be able to step into the industrial world as productive workers. In his relationships with the students he has always set a fine example for imitation. His quiet, friendly way and manner will be greatly missed by his students and fellow workers.

With the best of good wishes, we send Mr. Mulvanity off on the road of retirement. May his retirement years be replete with excellent health, happiness and good fortune.

In Memoriam

J. WALTER CALLAHAN

Last year, Mr. J. Walter Callahan of our Welding Department passed on to his reward. Mr. Callahan taught here at the B.T.H.S. for over thirty years. During this time, he made innumerable friends of both students and faculty alike by his quiet, diligent manner. In his trade, he was a craftsman without peer, due to his outstanding work. Mr. Callahan also took a personal interest in his students. He made sure that they were all placed in jobs upon graduation. As time went by, he checked on their work progress and helped them with their personal as well as trade problems. Many of his Welding students have made their mark in the world as tradesmen, business men and teachers of the Trade.

Born in Lowell, Mr. Callahan resided there all his life. On February 5, 1930, he was appointed to B. T. H. S. as a Trade Instructor in the Welding Department. In 1942, Mr. Callahan received his A. B. Degree from Boston College. He served as acting Division Head of the Welding Department for years. In 1960, a rating was held and at this time, Mr. Callahan was appointed Head of the Welding Department.

Although his actual association with us has been severed, nevertheless he will still be with us in spirit. His good works and likeable qualities will linger with us for a long time to come. May he rest in peace.

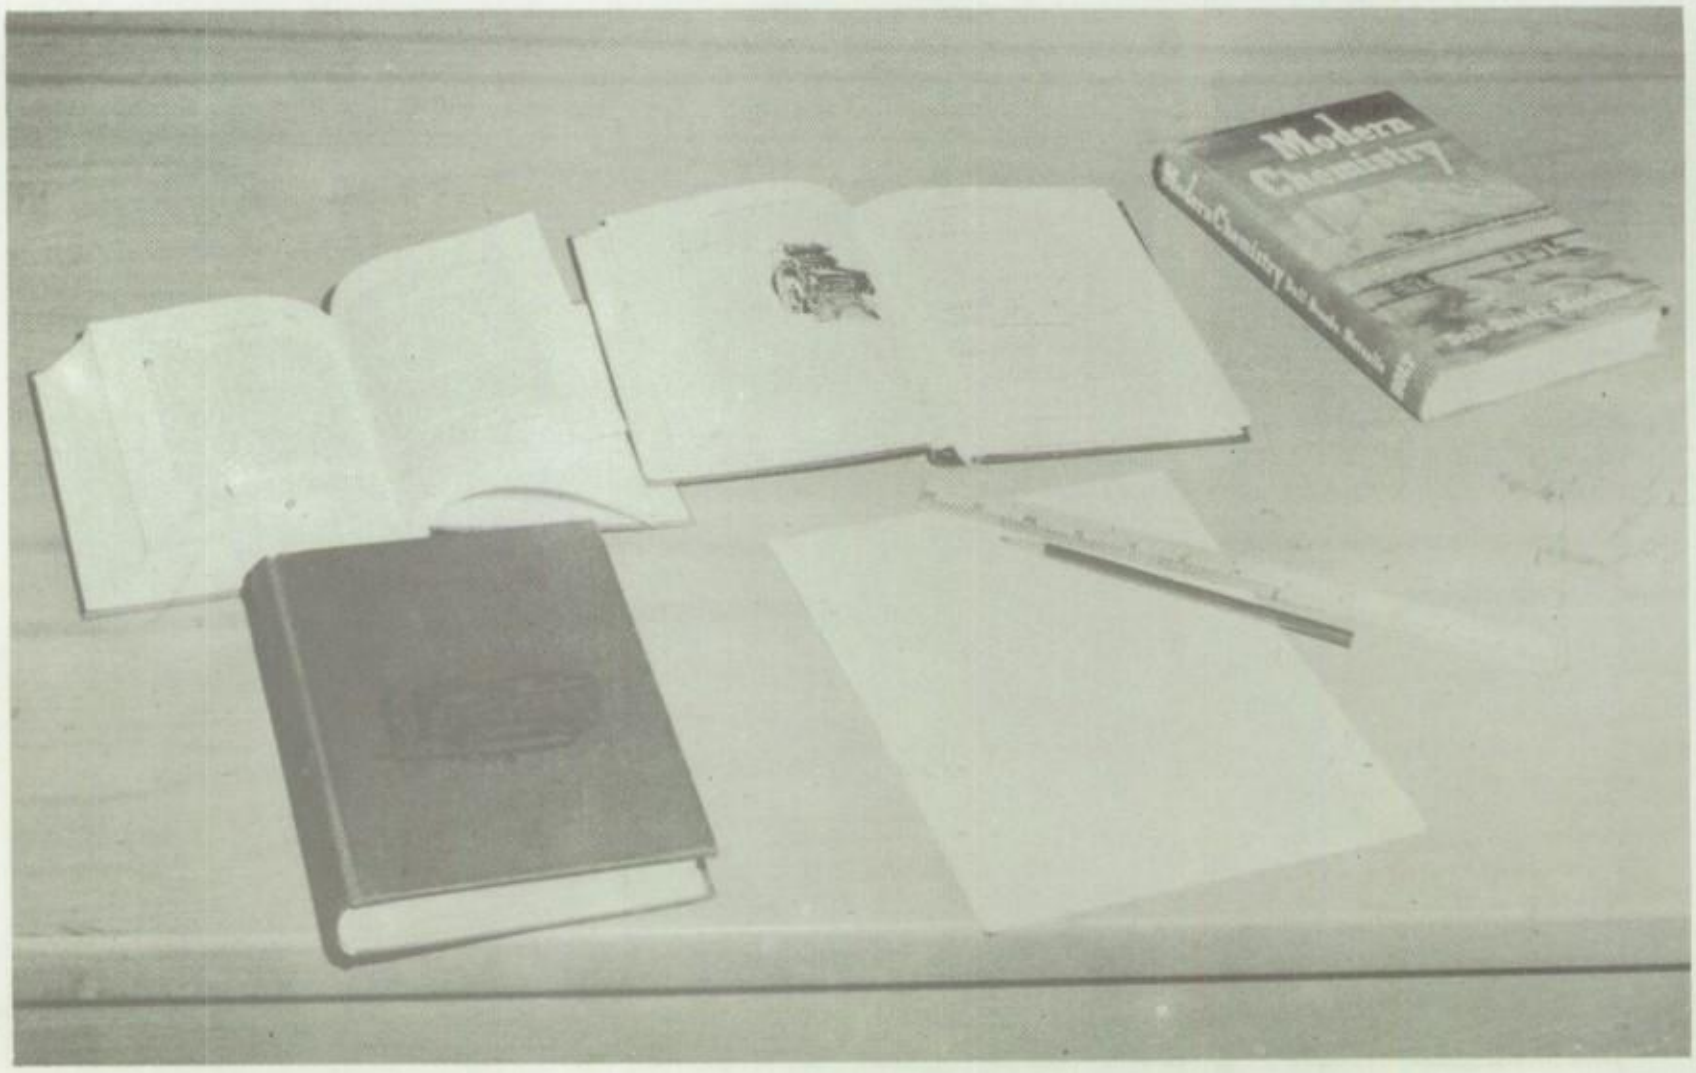
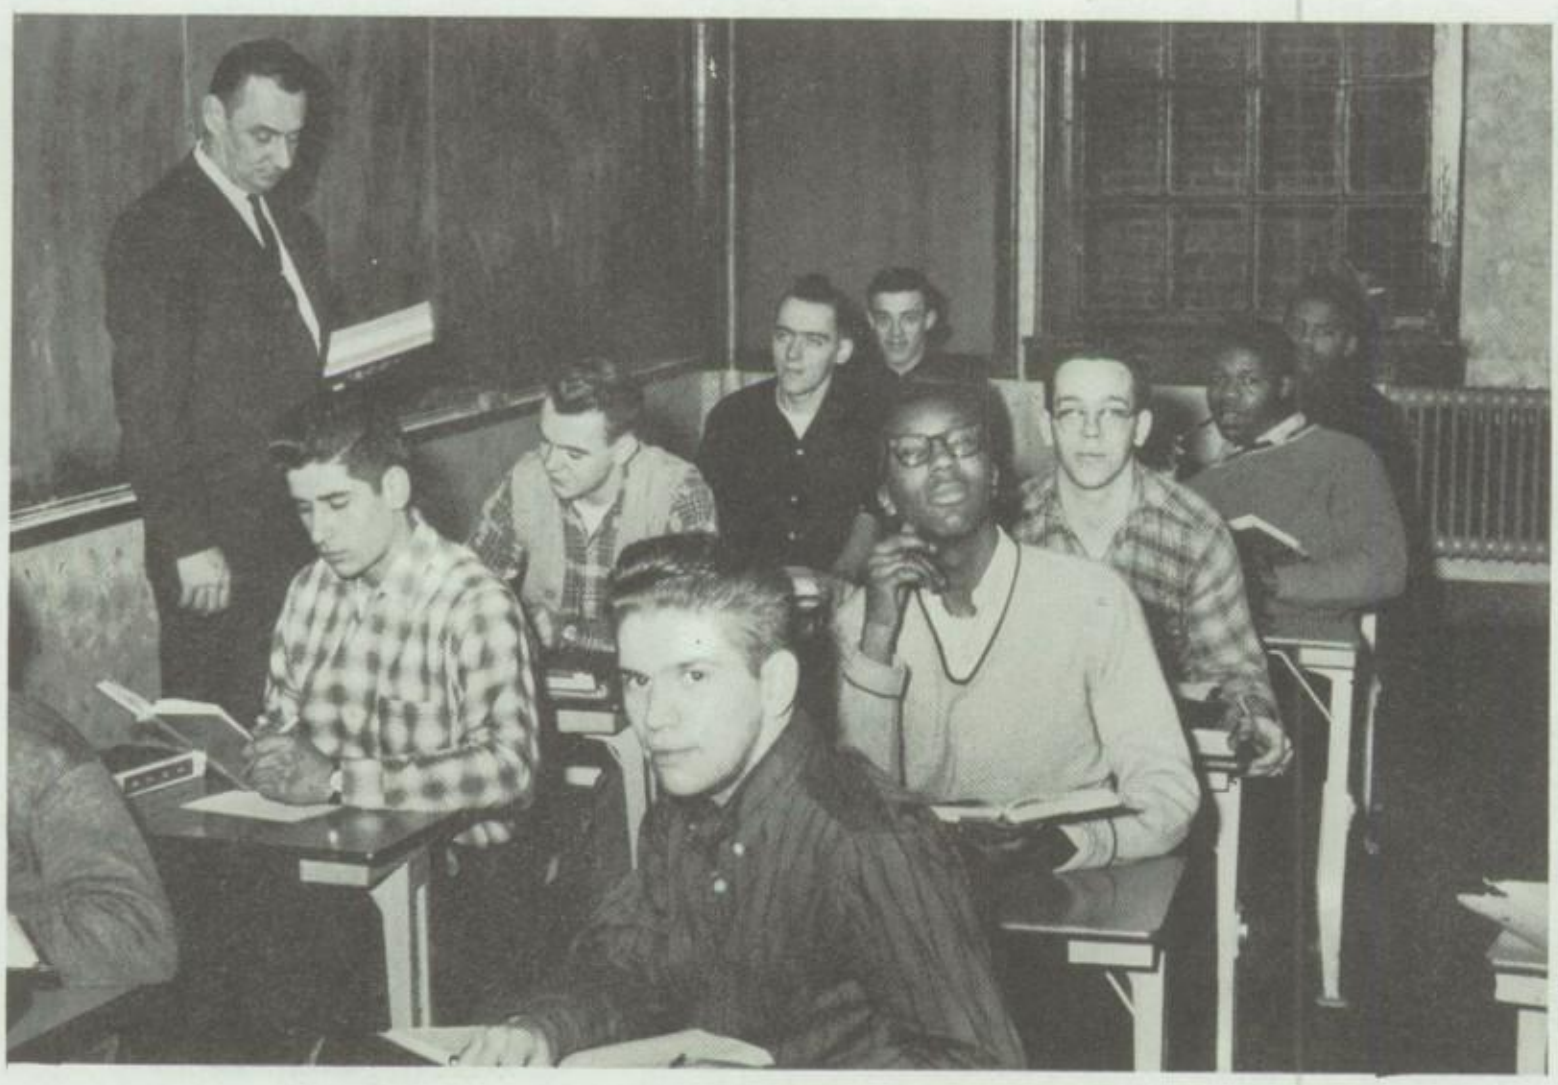
Departments

Academic Classes

Boys of Boston Trade High School spend alternate weeks in shop practice and academic classes. This system, which provides variety to the work, develops a well informed Craftsman, who not only has a grasp of the specific skill of his trade but also a fund of basic knowledge which underlies all trades and his life in general. In English he learns correct language and effective expression of ideas, things necessary to us all. In History, he studies the development of mankind and society, and the relationship of the craftsman to that development. In Mathematics, he learns the basic means of calculation needed alike in trade, in business, and in personal matters. In Science he learns the fundamental principles of matter and energy with special emphasis on the practice of his own trade. In Physical Education and Military Drill, he develops muscular coordination, group co-operation, and personal disicipline and leadership.



English



Mr. Wall conducting an English class

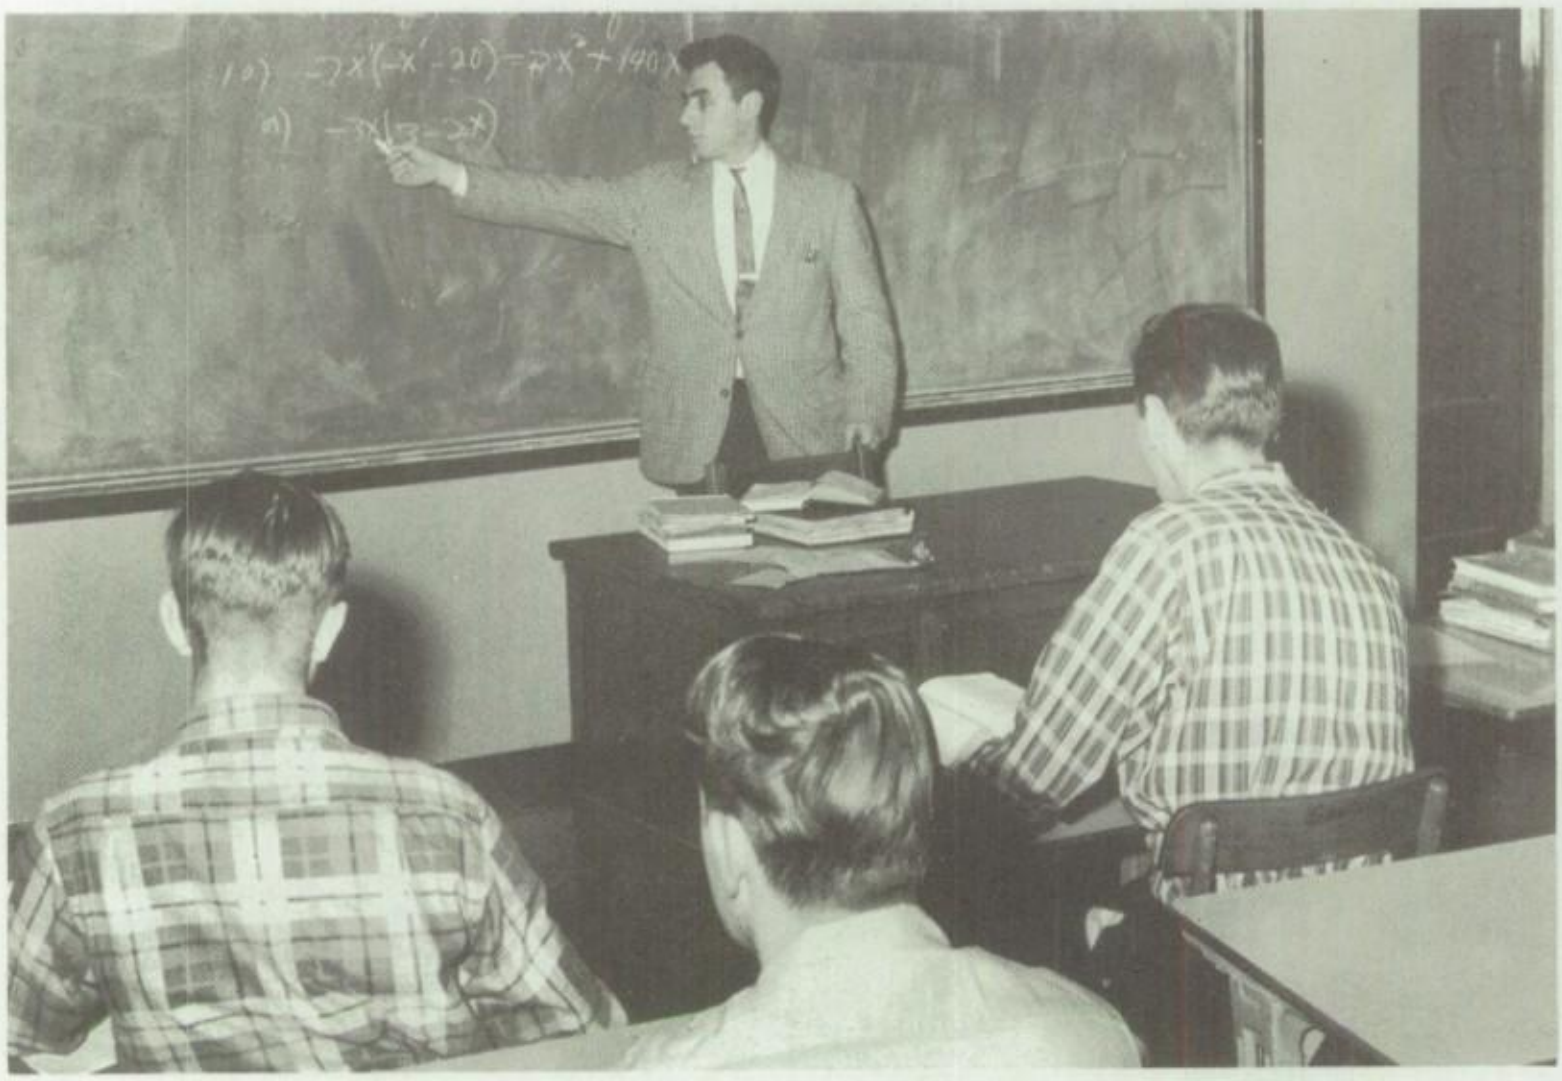
Not unlike other high schools throughout the country, the Boston Trade High School for Boys is faced with the challenge of educating its pupils in a new kind of world, of teaching its boys that life is a sense of values and proportions, and of conveying to its youngsters the idea that intellectual curiosity is a healthy, wonderful thing. There is no better way to a successful life than through reading. An awareness of this fact will implant and cultivate a sense of values, a sense of proportion, and a desire to learn. Too many youngsters are not aware that a world of interest awaits them at the turn of a page. The English Department tries to enlighten them by exposing the fascination of words. We strive to make reading attractive.

There is only one way to improve one's reading. One must try hard every day to read something of sound value whether it be found in a newspaper, magazine, or a book. Developmental reading is largely an exercise for the pupil himself. Outside help through teacher and aids is, of course, desirable, but in no way is it a substitute for self discipline.

A new world of enjoyment awaits all who seek it through reading. The ability to read, write, and speak intelligently is perhaps the most desirable of the arts, and we at the Boston Trade High School endeavor to promote the cause of good education by placing strong emphasis on reading.

The BTHS class of 1963 has been the first to feel the impact of our reading program. No doubt it is a happier and wiser class by reason of its participation. We urge each boy to develop the reading habit, to read a a little more each day, and to choose his reading with discretion.

Mathematics



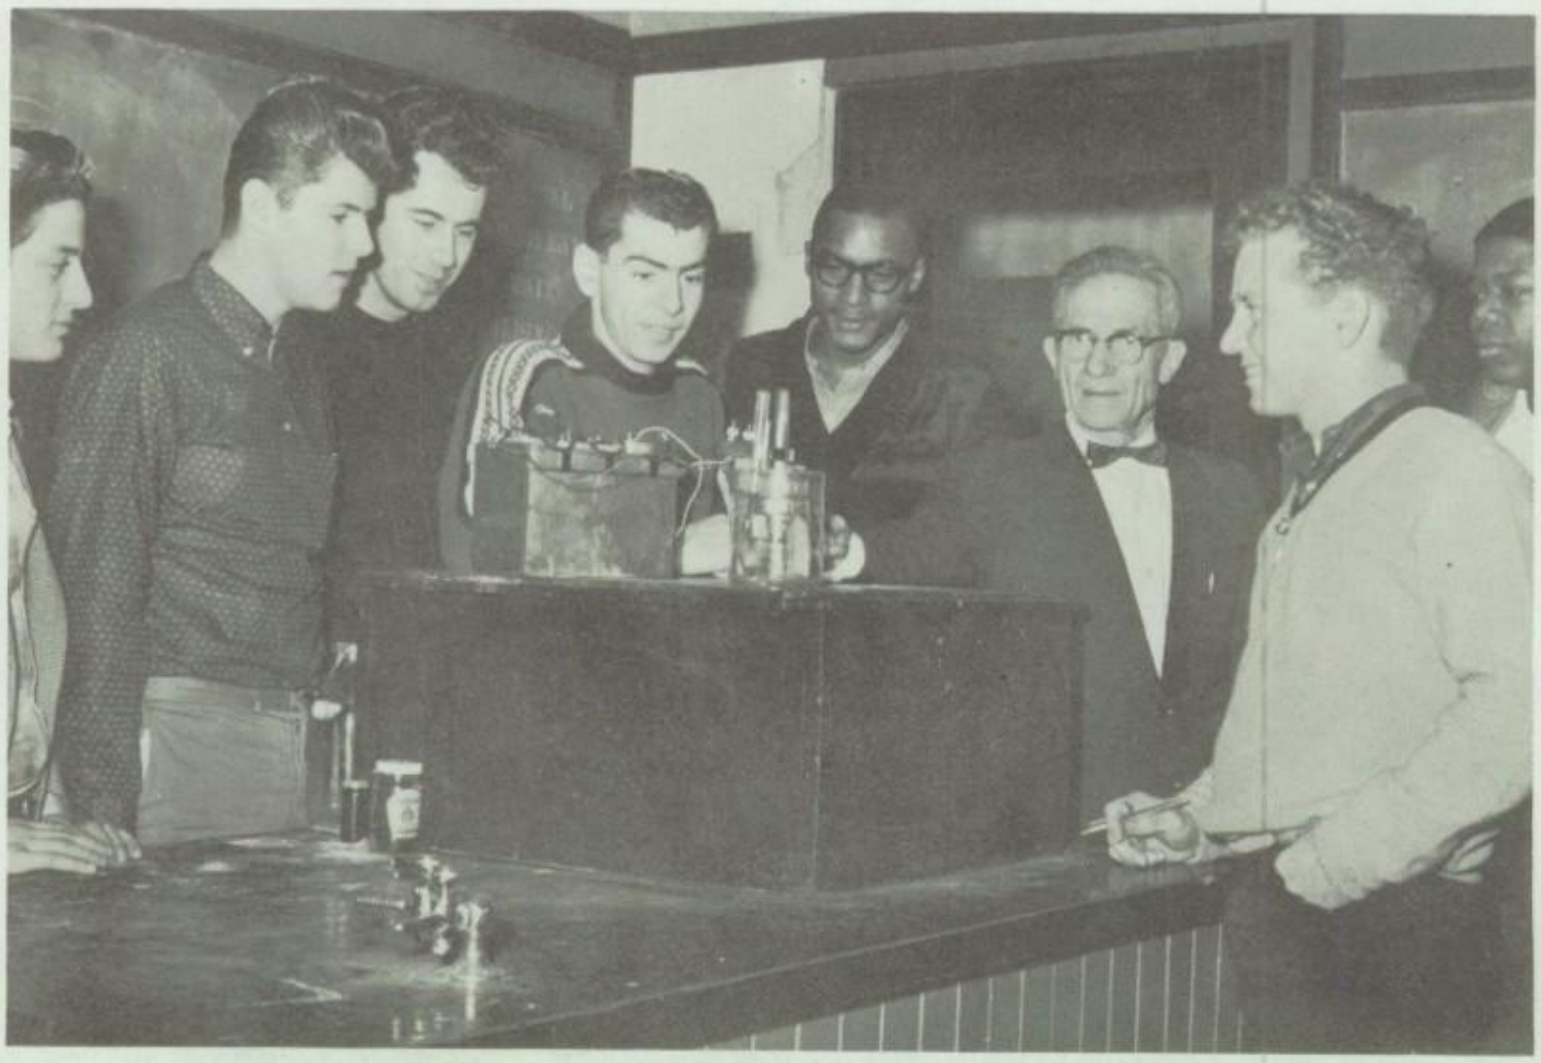
Mr. Joseph demonstrates the product of a polynomial by a monomial an attentive group

Mathematics, the Queen of the Sciences, is the foundation on which other sciences are built. It is needed as the basic tool for advance in many fields. In today's highly technical world mathematics is growing rapidly to supply the computational means of keeping industry on the move.

Here at Boston Trade High School it is realized that a good craftsman must have a satisfactory working knowledge of mathematics. Every shop uses mathematics and some use it more than others. We must never underestimate the importance of the subject; we should recognize it for its value and learn to use it to our advantage.

The reorganization of the mathematics program will take what is good and useful from the old and weld it together firmly with the concepts of the new. Starting with basic mathematics in Grade IX, the pupil will study successively algebra, geometry, and trigonometry. He will acquire a good familiarity with the slide rule and may, indeed, become proficient in the use of it. Related mathematics will receive the emphasis it rightly deserves. The net result of our new efforts will present to the industrial complex a better trained technician ready to assume responsibility and to realize greater profit for his improved contribution to society.

Science



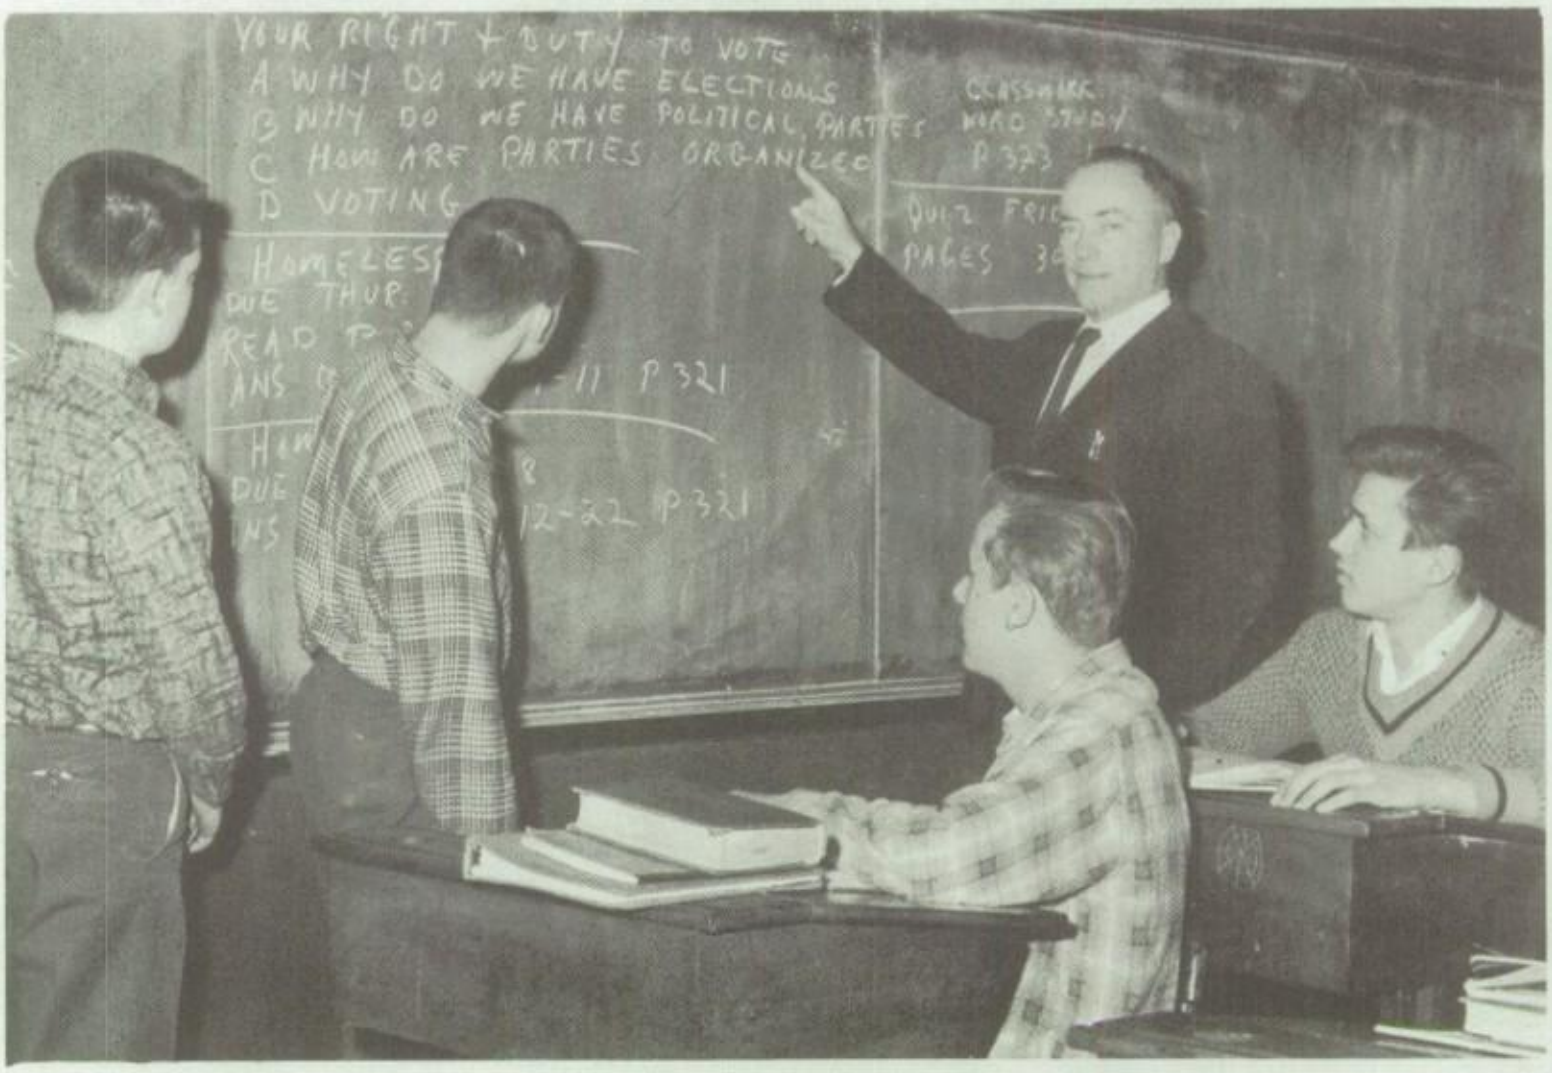
Mr. Palson demonstrates electroylisis

Science at Boston Trade has taken on a new look; its revised silhouette is designed to be attractive, challenging, and up-to-date. To this end new books for chemistry and physics were introduced this year, and new books for general science will be added next year. When science laboratories are installed to complete the modernization, our school will be adequately equipped to provide boys with a sound scientific training, and, for the most part, our program of studies will be in correlation with the fourteen specific areas of vocational concentration in our school.

As of this year the science curriculum is divided into four distinct segments: Grade IX studies general science; Grade X concentrates on that part of physics embracing mechanics, heat, light, and sound; Grade XI is chiefly concerned with electricity and nucleonics; and Grade XII probes the magic of chemistry. We shall continue to pursue this course of study because we believe it is the best for the needs of our pupils. Its new look is more than adequate, and it is sufficiently comprehensive in the light of present day demands.

It is the objective of the Science Department to graduate science-oriented boys eager to exploit their trade experiences and anxious to explore trade opportunities in a complex, scientific world. We feel that the new science program will give our boys a new confidence — confidence spirited enough to urge each boy to seize every opportunity to develop his talent and aptitude in a world of magic and change.

Social Studies

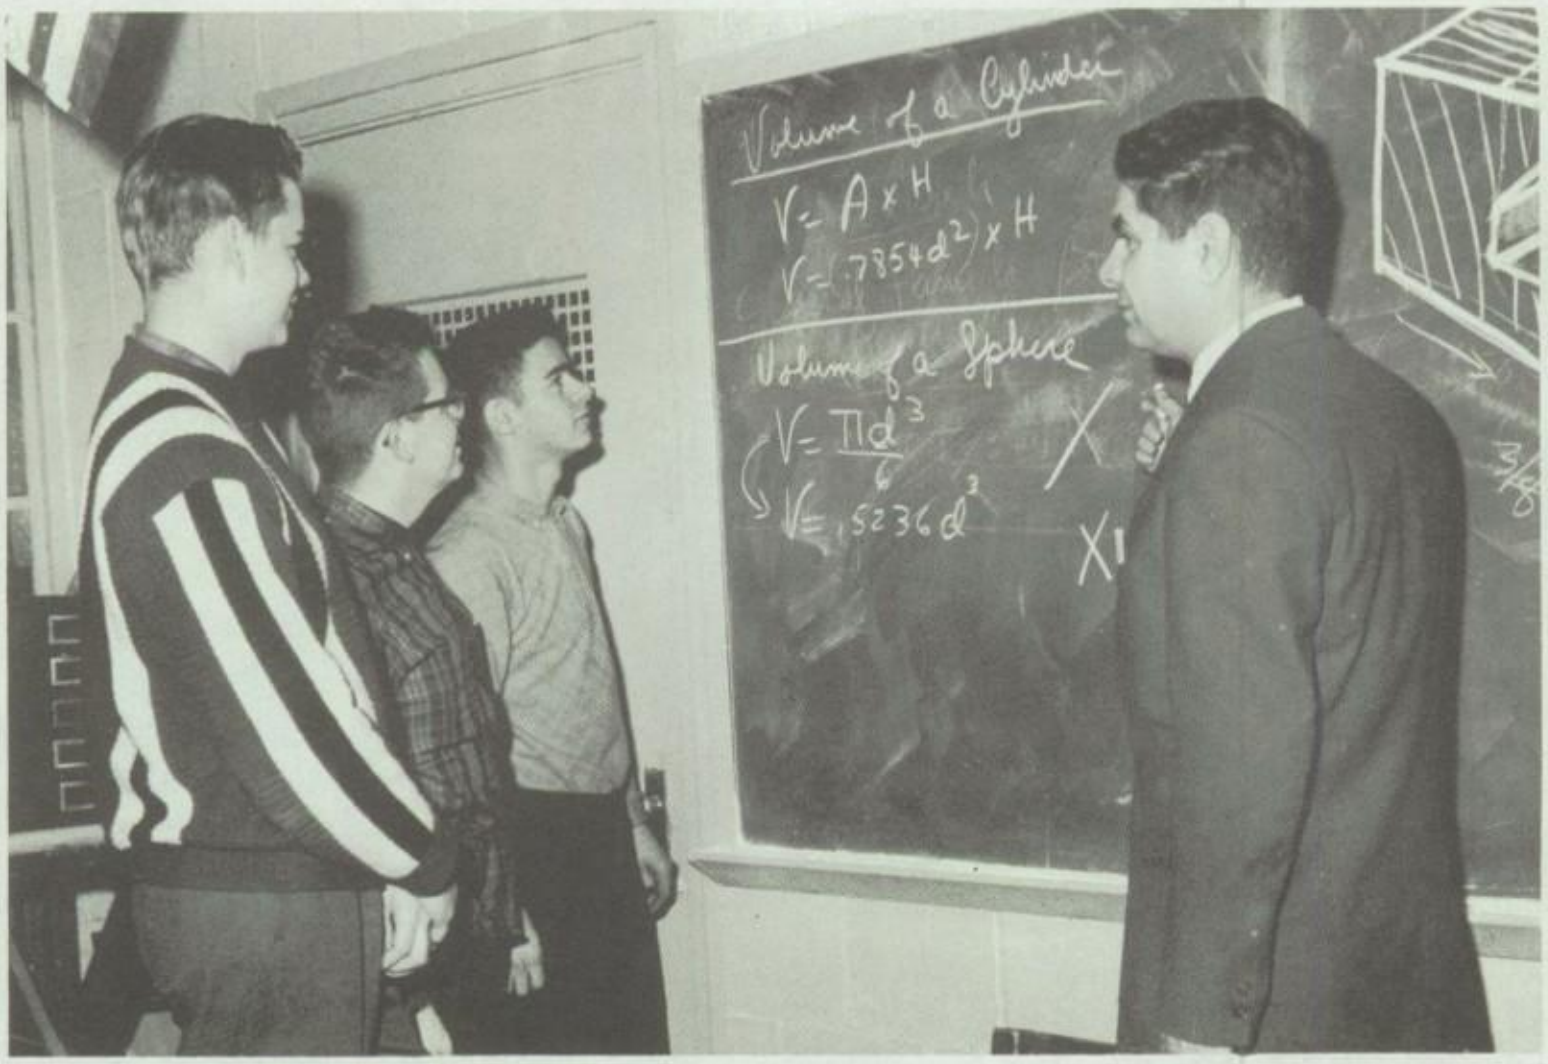


Mr. Caples conducts a class in American History

The chief aim of the social studies department of the Boston Trade High School is the development of the ideals of good citizenship. What are the ingredients of good citizenship? As we see it, an understanding of the meaning of a representative republic comes first; then to be followed by complete knowledge of the workings of such a republic; finally an inculcation of loyalty and patriotism, so necessary in our troubled world.

To these ends, we devote much time to the study of the structure and development of our local, state, and national governments. With this as a foundation, we proceed to the intensive examination of our history from the earliest times to the present. Because, in the last analysis, every country depends for its very existence on its economic growth, we finish our course with a study of American business in all its phases and the problems it has to solve.

Related Work



Mr. DeVita discussing problems in related drawing with seniors

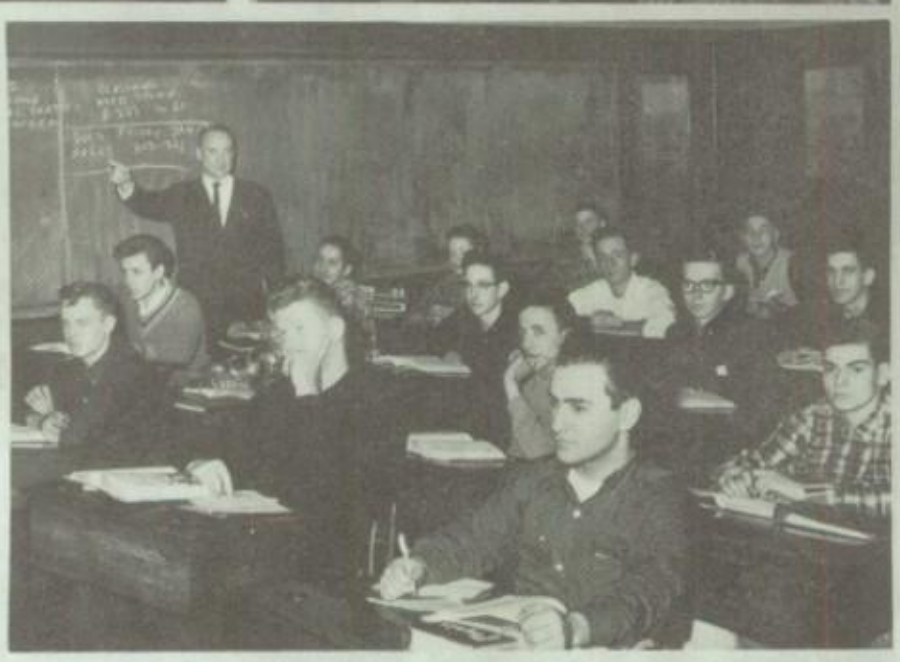
In keeping with the objective of the B.T.H.S. "to train boys for profitable employment in industry," instruction beyond the scope of shop work is given in academic and related work.

Training a student to become an intelligent apprentice in industry presupposes a thorough drill in trade fundamentals and also a complete understanding of related or technical information.

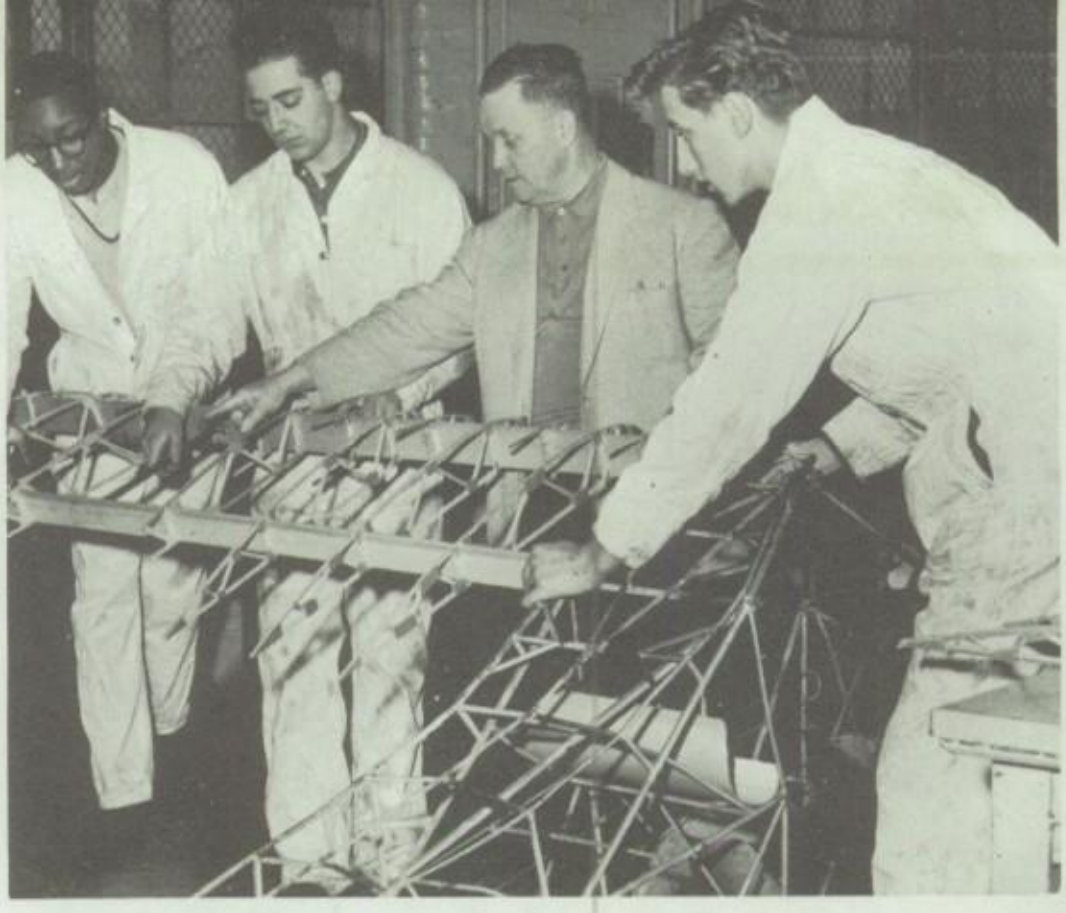
Every shop job performed contains certain technical information. To become better acquainted with the various processes of the trade, the student spends thirty percent of his school time in related instruction.

All related work must be taught by a tradesman. The related teacher gears his course of study to the shop program. He correlates his instruction as closely as possible with the shop jobs in process.

We feel that related work helps to stimulate interest and the boy is made to see his need for technical knowledge if he wishes to progress in his trade, perhaps to the position of an executive.



Airplane



Mr. Murray instructing aircraft wing construction

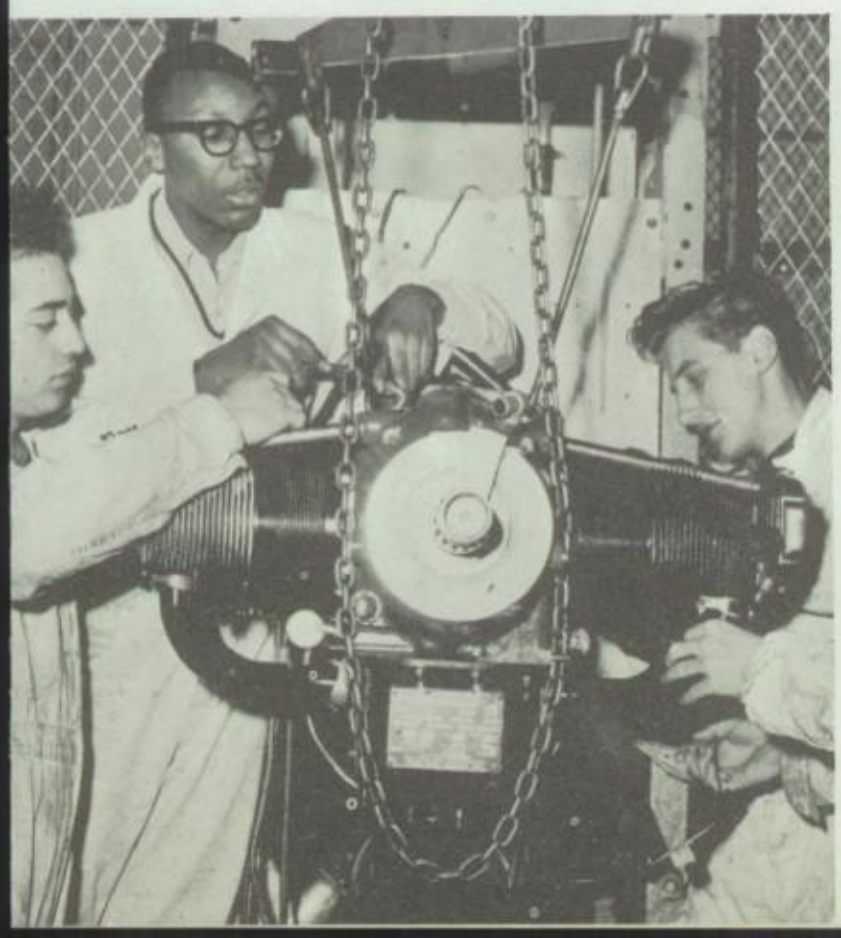
On any clear day when we look up into the azure sky we'll probably observe some type of aircraft in flight. It may be a sleek, swift, jet plane that we see hurtling through the highways of the sky, or a slower propeller-driven plane cruising along at a comfortable speed.

The story behind these planes may be unfolded in a school like ours, in our airplane shop. For here, students learn the fundamentals, skills, and theories regarding airplane maintenance and performance. They obtain these skills by repairing live aircraft, in the process of which they learn the woodworking, welding, wire splicing, riveting, and fabric work needed in the trade.

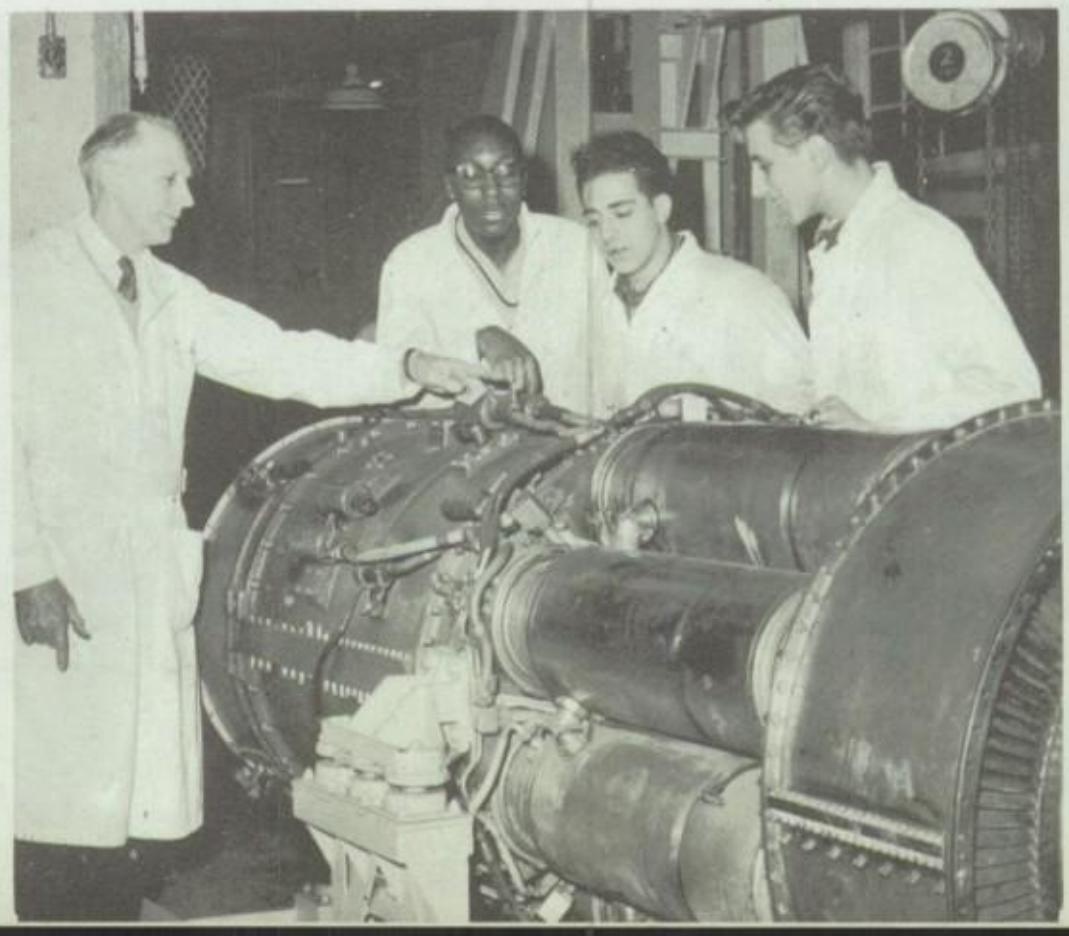
A graduate of our Airplane Department is prepared to work effectively under licensed aircraft mechanics in order to obtain his own license or to study further in a higher school of aeronautics.

One day the talented hands and clever minds of these students will serve to guide the fleets of aircraft that service this country and the continents of the world.

Installing an aircraft engine on test stand



Mr. Mattson instructing jet aircraft engine principles



Automobile Repair

Carbon & valve job on "54" Pontiac

The talents and facilities of the department are in great demand, and this is evinced in two ways: first, enrollment for 1962-63 reached a record high level; second, our shop service is sought out by an ever increasing number of car owners. These owners know that, by their patronage, they are helping the cause of vocational education in general, and contributing to the training of automotive technicians in particular.

Engineering advances and the extensive use of automatic devices on new cars make it essential that mechanics keep abreast of changes and developments in engineering and technology. In this connection, BTHS enjoys a remarkable arrangement with General Motors Corporation whereby outstanding students are invited to attend classes supervised by GM experts.

This year, as in the past, the Automobile Department nominated four boys to compete in the Chrysler Motor Car Contest. Field trips to the Watertown Arsenal and Weymouth Naval Air Station provided opportunities for our boys to gain first hand knowledge of advanced maintenance techniques. Such activities augment school training, and the combination promotes the achievement of an excellent, up-to-date training program.

The Registry of Motor Vehicles continues to recognize the quality of work done in the Automobile Department by authorizing the shop to function as an official inspection station.

Battery terminal inspection and cleaning

Inspection of clutch and transmission

Cabinet Making

Shaping table on floor router

To many the making, the finishing, and the maintenance of fine furniture is an absorbing hobby. So it is with us of the cabinet shop; but it is even more. It is our chosen life work with which we are well pleased.

Our shop is divided into two parts: the bench room and the mill. In the former we learn the safe and efficient use of hand tools, and the proper care of them. We also learn the design, making, and assembly of furniture and the various joints needed in that assembly. We acquire skill in ornamental carving, too. In the mill we learn the parts, operation, skillful and safe use of power machinery. Thus we learn both custom and mass production of furniture, so that we may work successfully in a shop of our own or in some larger enterprise.

Completed project

Planing stock to thickness

Carpentry

Using chalk line as guide for next course of shingles.

The carpentry shop is a great asset to both the students and the school. Sawing and nailing are the first operations taken up in the shop. Hand-eye coordination, the mark of skilled craftsman, also receives a first consideration. Basic training in making a variety of joints and showing their relationship to houses, helps to develop the student and gives him an understanding of tools and their functions..

Advancing to the layout and building of houses, to scale, creates a better understanding of their parts and the importance to each other in the construction of a full size house. Jobbing in the building, besides doing a variety of projects in the shop, plays an essential part in total growth of skills.

When a student starts framing a full size dwelling, he gets a realization of the problems he faces when he graduates into the "pay as you learn" category and faces the challenges of industry. The ultimate aim of the Carpentry Department is to develop apprentice carpenters who will be socially, emotionally and intellectually mature to work side by side with other men in the trade.

Potential carpenters reveiwing a problem on board feet computation

A related work class in carpentry discussing lumber propetties

Drafting

Drafting boys

The subject of Drafting is pursued as a most essential part of our vocational curriculum.It functions as a complement to the specific trade a boy is studying, and it becomes the means whereby a talented student can translate into graphical language the creature of his imagination. Specifically, through drafting, the electrician, machinist, cabinet maker, etc. is provided with the special equipment to put his orignial, constructional ideas into a special language which he and others with similar training can understand. Indeed, it is the language of the craftsman, the artisan. It is the means of communication which distinguishes the draftsman from those of lesser ability; it sets him apart as skilled.

Boys in the drafting class are taught to use their imaginations. To this end they spend two years studying the fundamentals of drawing, and in that period of time, they progress to a thorough study of the theory of third angle projections. After two years of basic training in which three dimensional thinking becomes part of the academic blood stream, they move on to study everything from sectional views to principles of layout and design. A good knowledge of mathematics and science is required.

Mr. Dixon - drafting boys at work

Drafting shop boys at work

Electrical

Mr. Pirrone Electrical Related Instructor giving lectures on Alternating Current Theory to Senior Class

With his kite Benjamin Franklin certainly started something; Bell, Edison, and Steinmetz carried on; and today in a more humble capacity our Electrical Department continues the work. Pupils are trained in the basic principles of electricity and its practical application to present day needs.

Ninth grade boys are introduced to electrical work by wiring simple bell circuits, door openers, and other uncomplicated devices. These operations are followed by work on series and parallel circuits.

At the tenth grade level the main emphasis is placed on the study and operation of direct current motor principles, but a considerable amount of time is spent on lighting circuits. In this latter connection, bulbs, switches, general wiring techniques, and electric light systems are studied.

In the eleventh and twelfth grades students learn the principles of alternating current, uses of A. C. motors, and the wiring of induction coils. It is in these last two years that the boys of the Electrical Department get a substantial amount of practical work.

Finally, the study of three-phase current is undertaken with its application to motor and transformer circuits. When a student successfully completes this course, he is ready to step out into the industrial world to advance in the skill and wisdom of his trade.

Seniors check wiring for remote control

Seniors wire meters for transformer test

Machine Shop

Mr. McNulty checking a Jacobs Chuck

The pressure is now upon us nationally to maintain our lead in technological fields. This demand is especially heavy in the field of machine shop practice.

During our course of training here, we learn about many types of machines. We learn the use of various micrometers, calipers and gauges. Instructors teach us how to set up and operate lathes, drill presses, shapers, milling machines, etc. The making of finished parts is accomplished to a high degree of accuracy.

Since mechanical devices are being constantly patented, it is easy to see that our field is and will be unlimited. And because our field is constantly changing, it will remain interesting to the tradesman.

We have chosen well, have been instructed thoroughly, and have confidence that we will be competent machinists providing for ourselves and serving the community in a valuable manner.

Our lathe unit at work

Mr. Saxon demonstrating a milling machine operation

Painting

Picture painting

The color engineers of the Painting Department are truly men of many talents. From furniture finishing to wallpapering and interior decorating; from the techniques of mixing to the artistry of imaginative ornamentation, the boys of this department achieve the satisfaction of being purveyors of beauty through color. Beauty is its own reward, and truly it can be said that the master-mixers of the Painting Department enjoy the compensation of justifiable pride in the attainment of excellence through color.

Work projects, varied and many, are so important to the development of painting skills that, without them, no boy would receive any real challenge to his ability. After an intensive course in the fundamentals, student painters advance to the demanding requirements of finishing and re-finishing furniture. Period furniture is perhaps the most interesting outlet for excellence in workmanship, and, with a solid background in rubbing, stripping, mixing, and polishing no boy is unequal to the work.

BTHS owes much to its Painting Department. Our building is cheerful and animated, and much of this is due to the cooperation, workmanship, and taste of the personnel in the department.

Lesson in sanding

Spray painting

Plumbing

Roughing - in

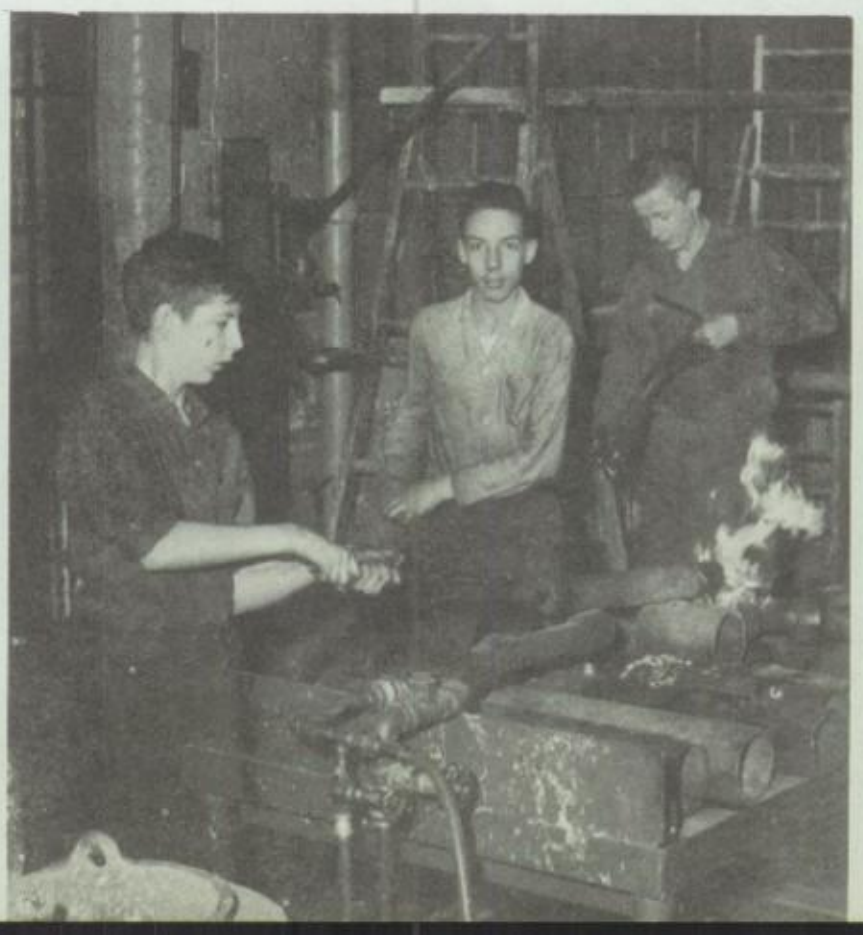
We of the Plumbing Department know that we have chosen a trade which will guarantee us steady, well-paid employment in an activity in which the opportunities for advancement are excellent. We have chosen a trade of the greatest importance to the comfort, health, and convenience of all civilized human beings. It is our job to provide fresh water, sanitary sewage disposal, efficient heating and laundry systems for homes, apartments, hotels, and public buildings. That we may be able to do these things, we must undertake much study and training.

The art of soldering, sweating copper, working screw pipe, and roughing-in soil pipe is learned after extensive practice. Joint wiping, lead burning, and the sanitary installation of a variety of modern plumbing fixtures are also studied. Tool care is no less essential to good plumbing than the work itself, and in this responsiblity we are well indoctrinated. The principles of science and mathematics as they apply to plumbing are studiously investigated. Without a thorough knowledge of theory no man can be an expert plumber.

We take pride in our work whether visible or hidden. We learn the code for our trade and the principles of sanitation engineering. We are satisfied with our training and confident of our success.

installing shower and bath supplies

Melting - out



Printing

Stripping the Craftsman

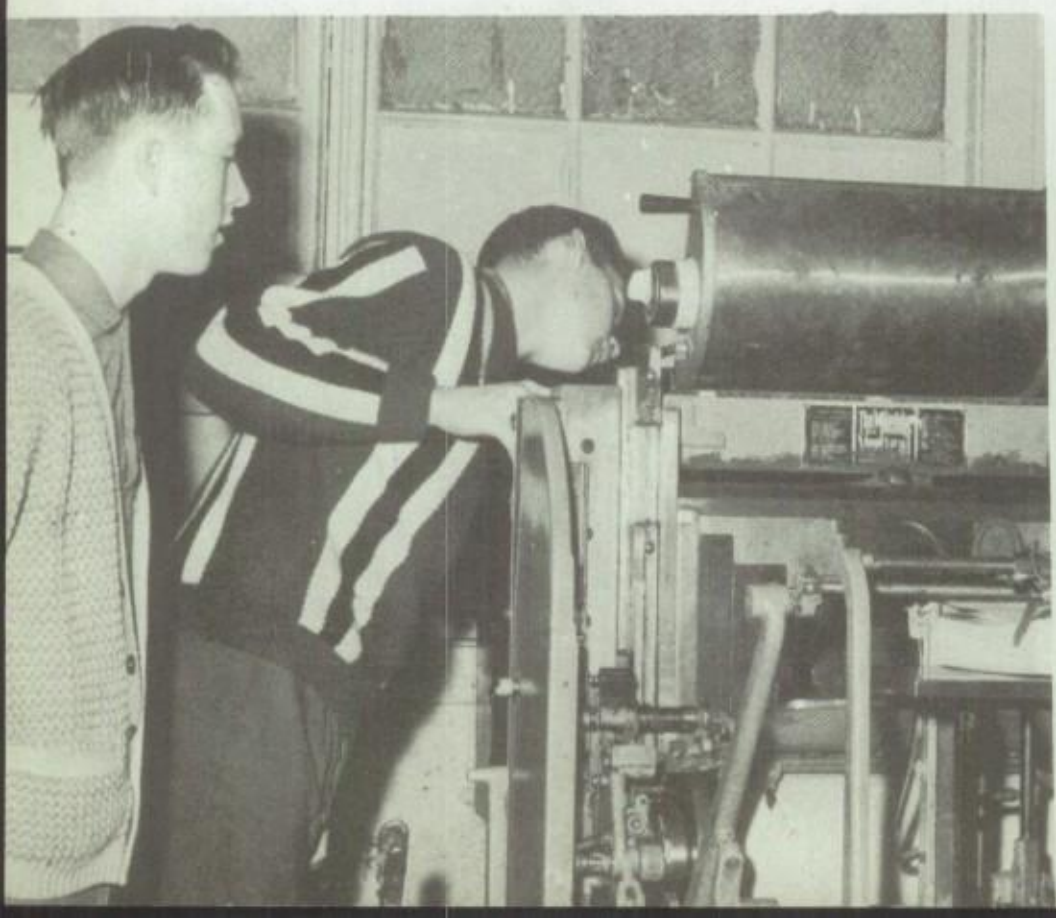
The aim of the Printing Department is to prepare each boy to be a successful apprentice printer. The printing industry is developing and expanding rapidly, and the B.T.H.S. shop is keeping abreast of new printing techniques.

There are two divisions of instruction: the press room and the photolithography room. Our new students are introduced to both types of instruction to enable them to make an intelligent choice for future work.

The letterpress and photo-offset shops are the work areas for future printers. In the first they learn about type, hand and automatic composition, power presses, and paper stock. In the photo-offset shop they study camera work, plate making, stripping, layout, and press operation. High speed multilith presses are in both shops.

After four years of intensive application each student printer is well prepared to enter industry as a knowledgeable apprentice.

Seniors checking quality of printing on Miehle Vertical



Operating the Linotype

Sheet Metal

Fabricating Ventilation Pipe

Groundwork study for skill in the sheet metal trade is extensive, for it is the necessary ingredient so important to the craft. In related study considerable time is spent building a foundation for success in the field. For example, three types of drawing are studied for good layout work. Radial and parallel line development are examined before triangulation drawing is analyzed, and all this before a sheet metal worker is able to perform his work well. These studies, in addition to an investigation into the purpose and use of special tools and machines, represents the groundwork for skill in sheet metal practice. No boy fails to receive a broad training in related work before the practice of his trade becomes real.

Under careful guidance the pupil progresses from the design and manufacture of simple implements like pails and funnels to complex planning and construction of specialized equipment and complicated fittings.

Improvements in the design and function of industrial equipment peculiar to ventilation and heating have made great demands on the man who works with sheet metal. The theoretical and scientific significance of research and development cannot be less than obvious, and its importance cannot be overstated. At B.T.H.S. considerable time is spent on drawing, mathematics, blueprint reading, and science, and with this background, a graduate of the Sheet Metal Shop is prepared to take his place in industry as a sucessful sheet metal worker.

Bench Work

Making one piece box

Welding

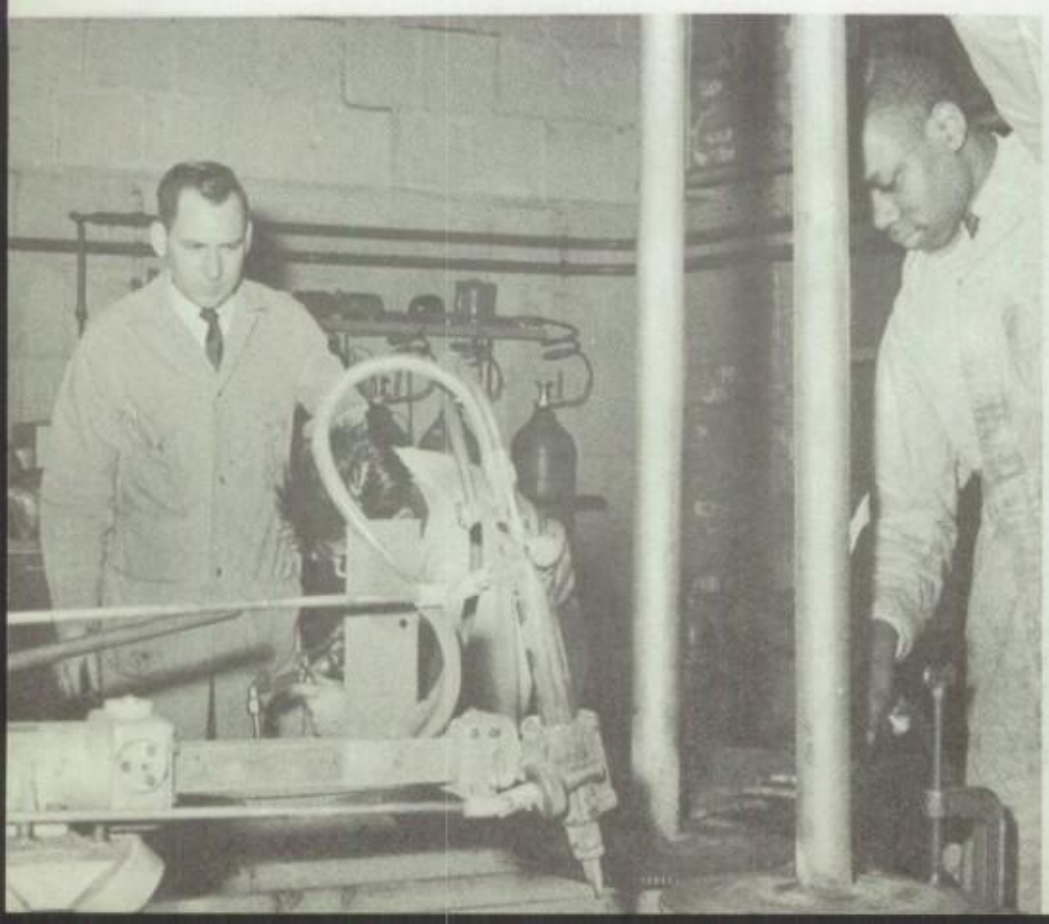
Weld it strong

The demand for knowledgeable craftsmen in this age of development and expansion is great, and the welding engineer equipped with modern skills and techniques is a most essential part of industry's scientific progress. New discoveries in the field of metallurgy require clever use of materials, and in this area, welders play an important part. At Boston Trade High School our pupils are trained in everything from the ancient art of forging to the fashionable dexterity required in heliarc welding. Considerable money and effort are spent to provide a good welding education to young men who have the desire to become part of this segment of industry.

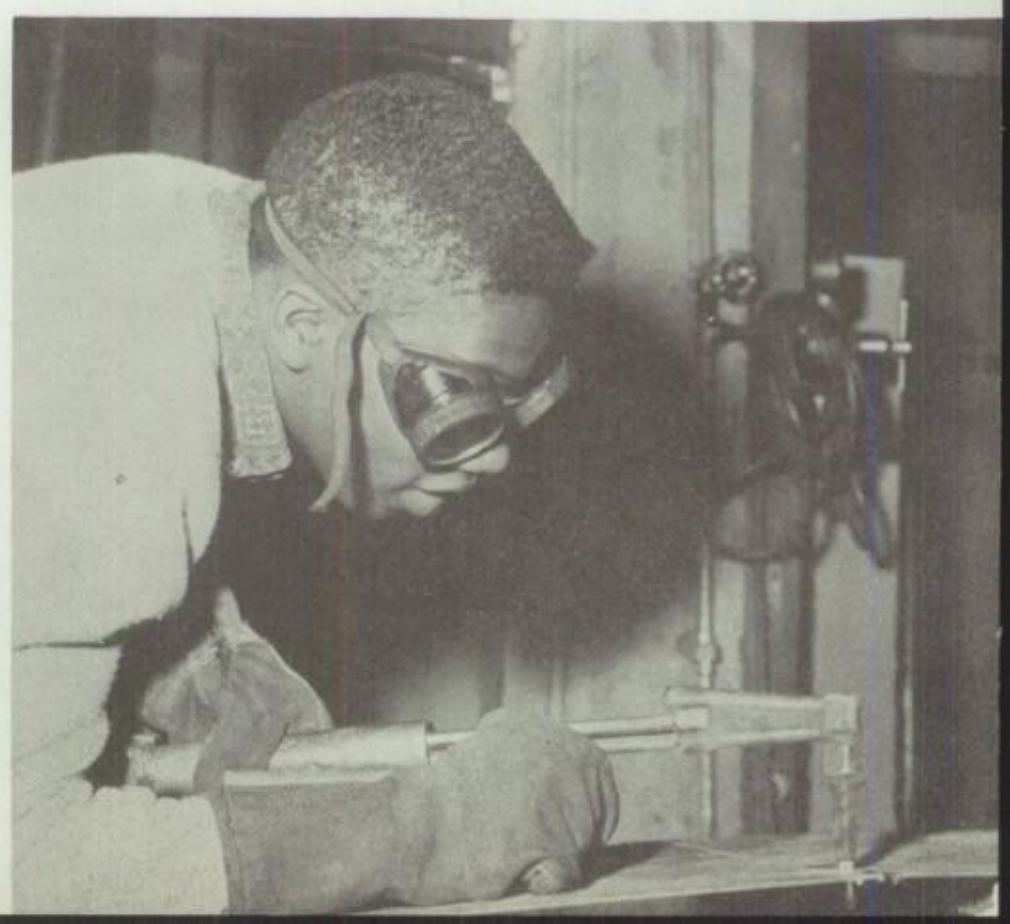
Opportunities in welding are excellent, but the requirements for success place a substantial amount of responsiblity on the worker. Employers insist that the welder be a good technician, skilled in his trade. It is with this in mind that the instructors at B.T.H.S. perform their duties.

In the Welding Shop pupils study metals and their properties, and they learn to operate various machines and tools related to the trade. After a thorough instruction in these areas, the practical applications of welding are undertaken. Considerable experience is gained in working with light gauge metals. Special emphasis is placed on brass, copper, and stainless steel.

Monograph cutting gears



Tack welding senior



For Our Health

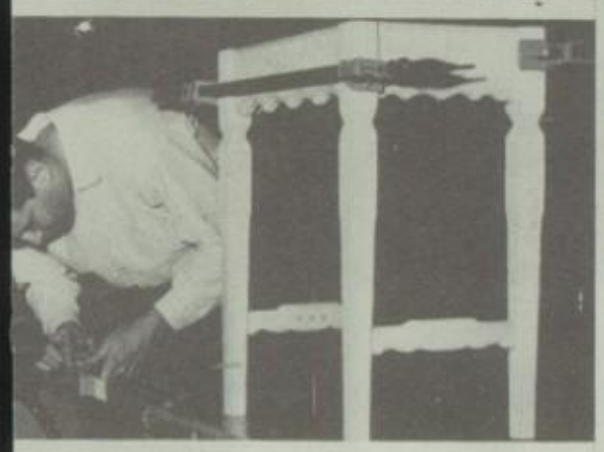
The school nurse plays a major role in the school in caring for the welfare of the students. There is hardly a student in the school who, at some time or other, or quite frequently, does not come into contact with the school nurse.

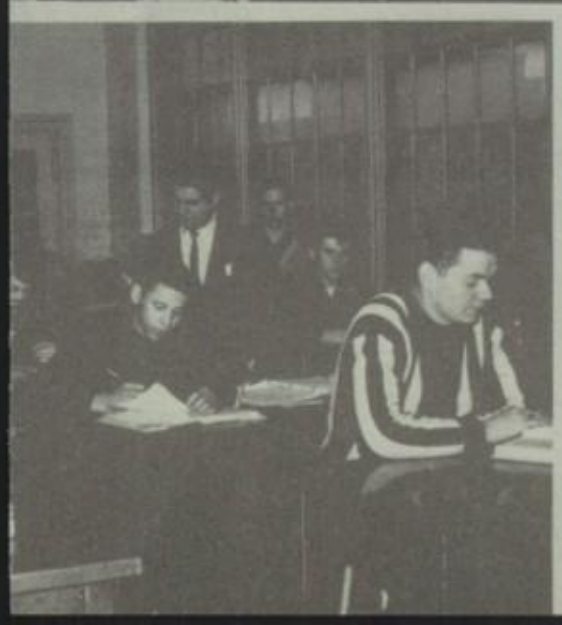
Mrs. Currier takes care of the health records of all the students. They have to be kept up to date. Students' health and progress charts are continually checked.

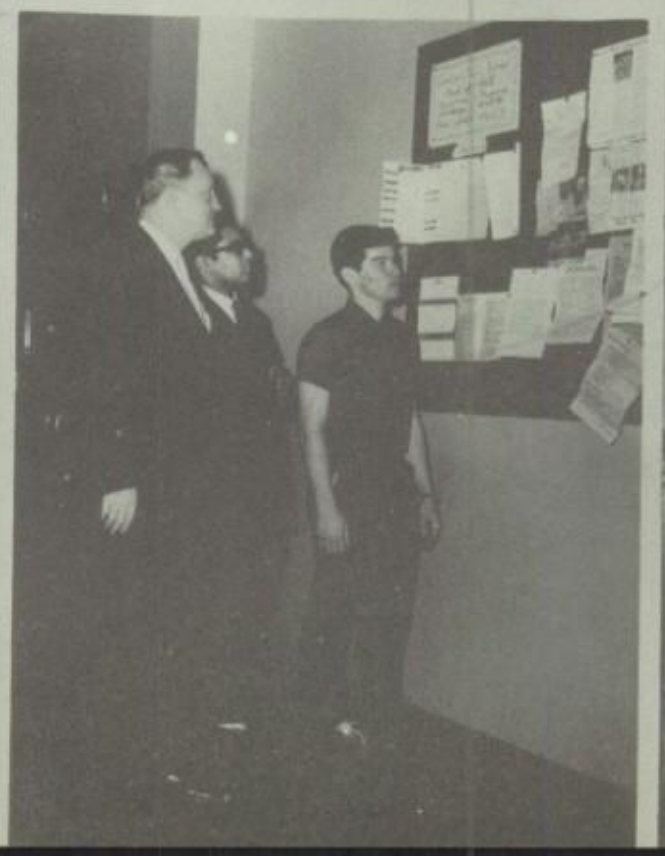
Early in the morning students line up for sick call. First aid is administered any time of the day. Physical examinations and check-ups are given to all students. A close check on height and weight is observed. Hearing and eye tests are conducted every year. Teeth are checked and students are urged to see their dentists or go to Forsyth. Anti-Polio inoculations are also administered.

We have mentioned only some of the myriad duties of our school nurse, a very important person in the school.

Shop pupils receive Sabin Polio Sips from
Mrs. Currier, School Nurse







THE FACULTY
First Row: Messrs. Bornstein, Brown, Cotty, Lerro, Ryan
Second Row: Messrs. Wayne, Sonego, Stone, Fleming, Cavanaugh

Boston Trade High School Annex

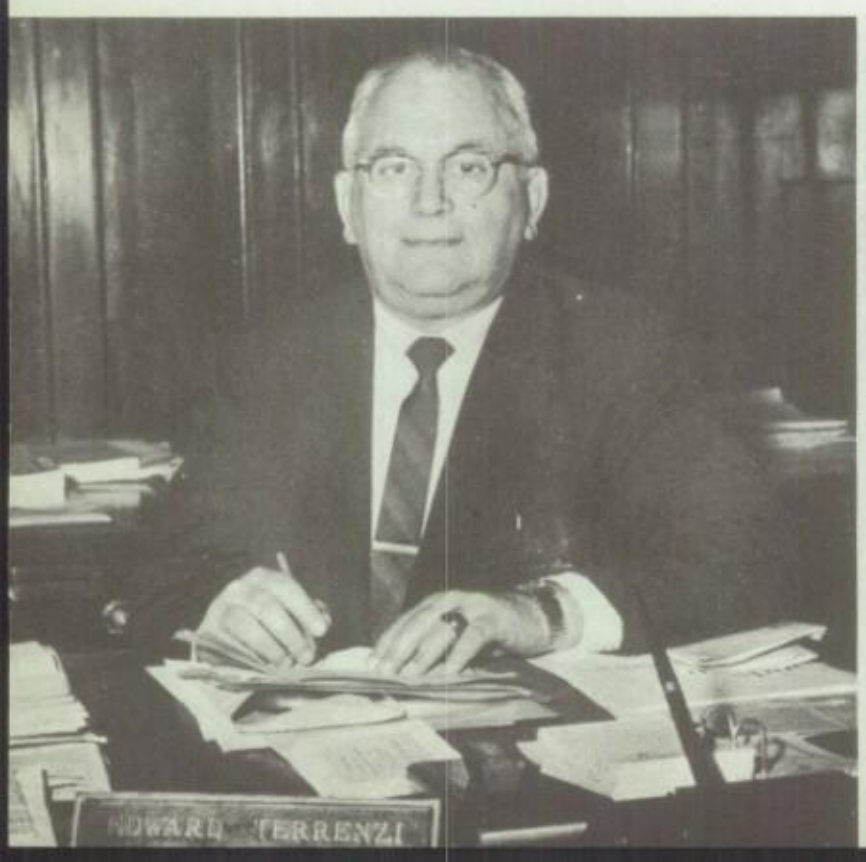
Our annex is located in the Henry L. Pierce School building on Washington Street in Dorchester. Here is housed our Baking and Radio Departments.

The Baking School was established here in 1945 with the cooperation of the Commonwealth, the local school administration, and the Master Bakers of Greater Boston. A complete course in baking leading to a high school diploma is offered in this school. Many boys have graduated from here and have stepped into well paying jobs in the industry.

Since 1954, our Radio Department was transferred here from the main building on Parker street in Roxbury. With highly skilled instructors, the work of training boys in Radio and Television repair work continues. As part of their training the students operate their own radio station.

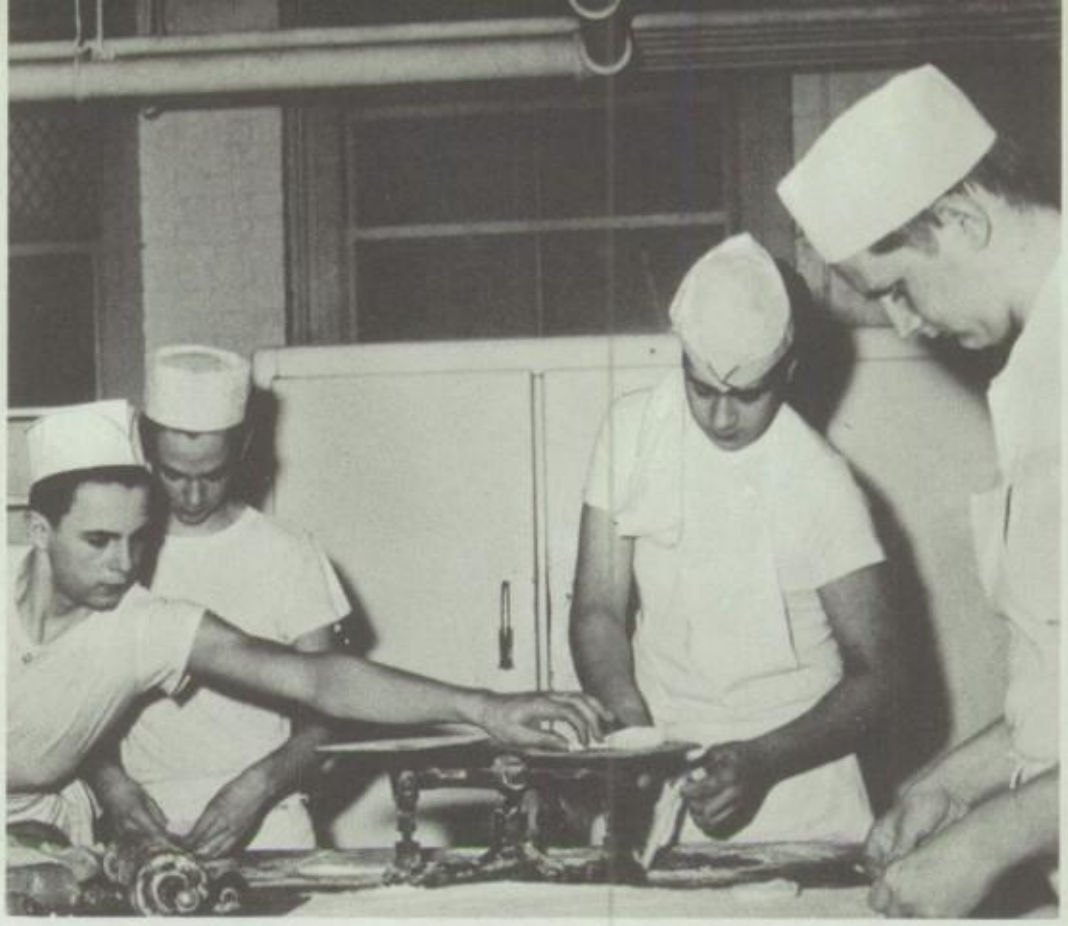
It is interesting to note the progress of this school, from a shop of eighteen boys, to a school of three modern well-equipped shops serving almost two hundred pupils.

EDWARD TERRENZI, Head Master



Mr. JAMES B. DOLAN
Teacher - in - charge

Baking



Bakers carefully weighing ingredients

The Annex of the Boston Trade High School has been the home of the Baking Department for eighteen years. Since its origin large numbers of boys have been attracted to the school. They have advanced to attractive, profitable careers in baking. Modern equipment and progressive methods are used in the department, and each boy may learn how to become a good baker. One day he may be the proprietor of a thriving enterprise.

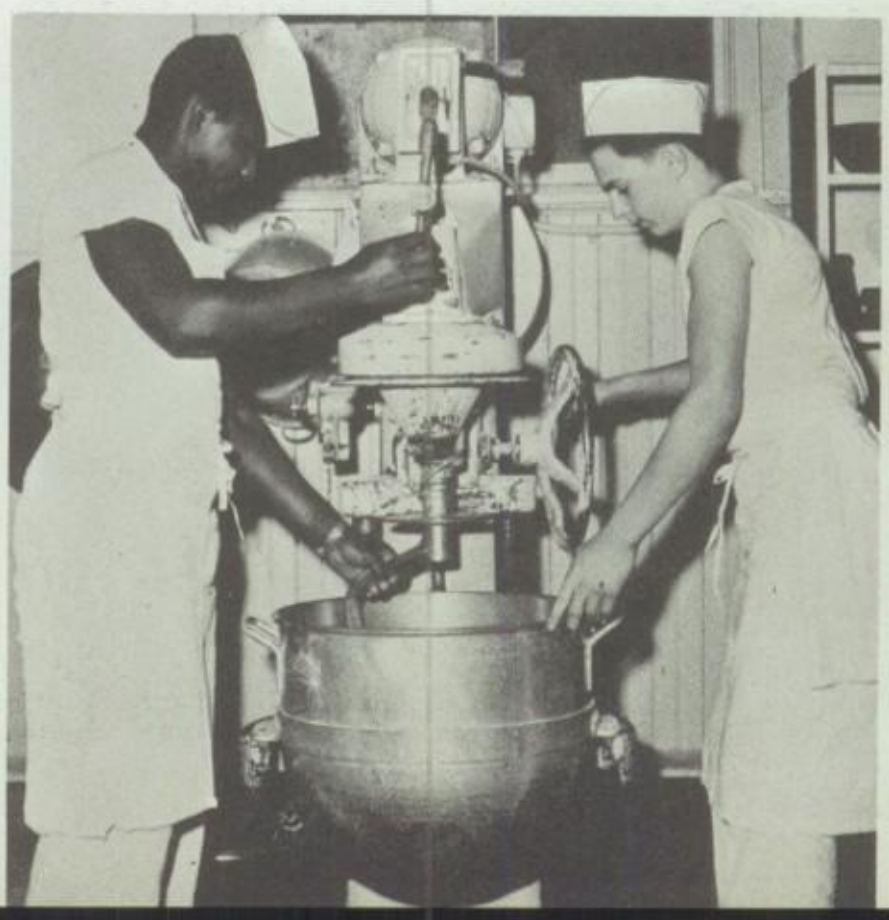
Practical experience is gained not only in preparing and baking goods, but also in packing, freezing, and storing these products. Large orders give the student bakers an opportunity to work on an extensive production scale in anticipation of industry's demands.

Handling and distribution are no less a part of baking than the preparation itself. In a word, all aspects of the industry are studied, and upon graduation, each boy is well prepared to be tomorrow's baker.

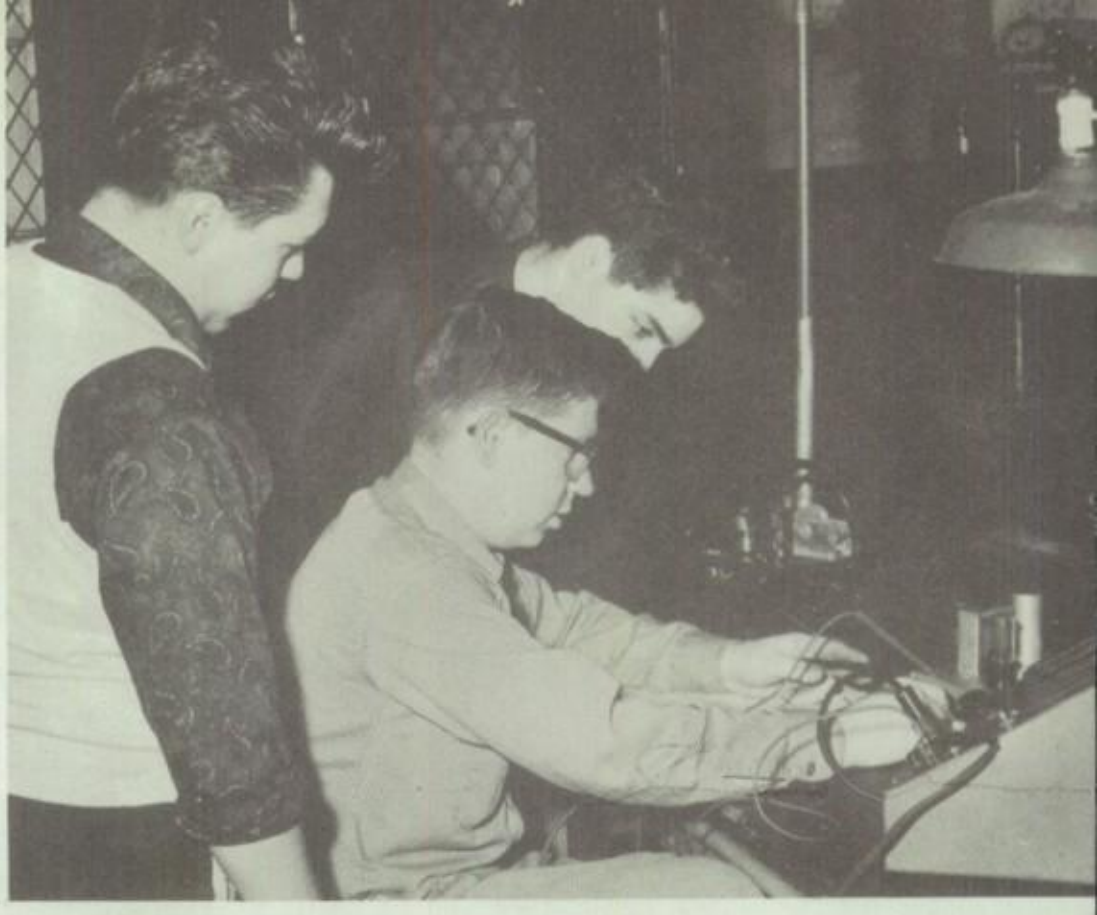
Classroom work is an important part of the baking program. Related work, food chemistry, and academic subjects are a significant part of a baker's training and in conjunction with the shop activities, they contribute to the realization of an intelligent baker.

Future bakers

Learning use of mixing machine



Radio and Television



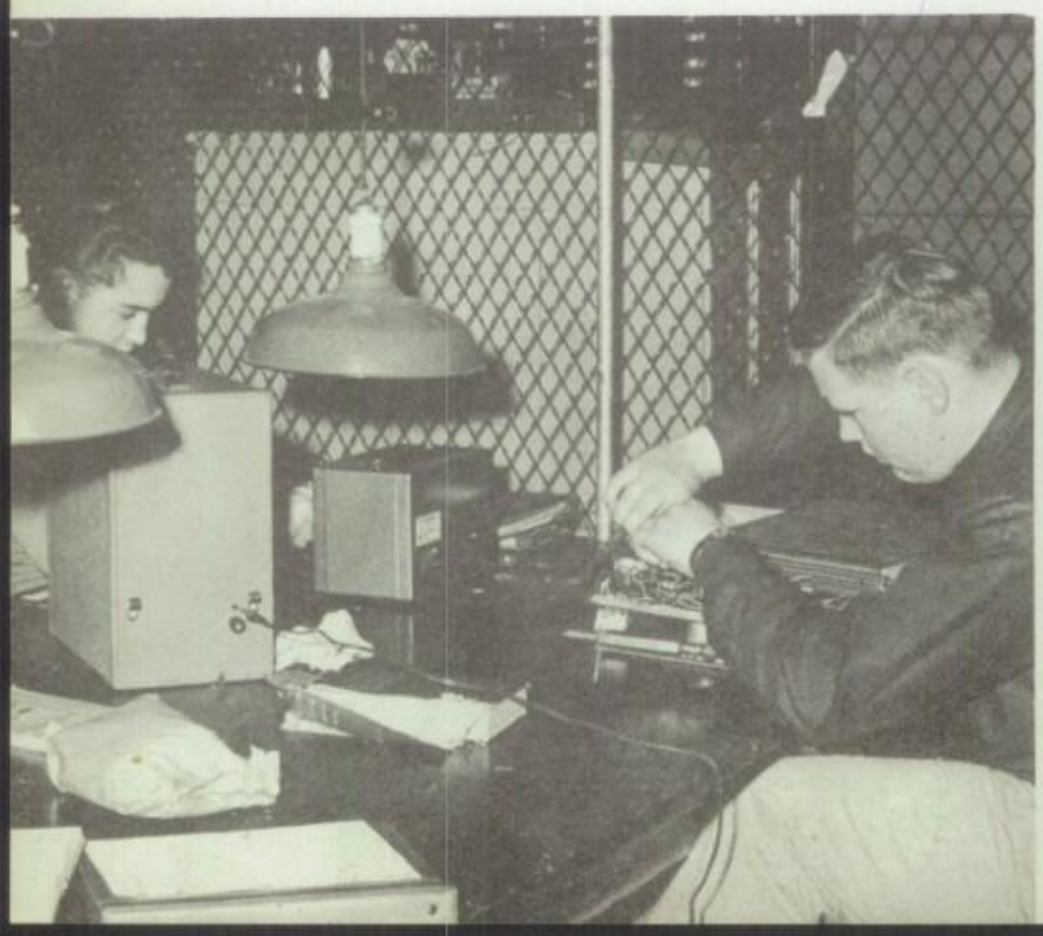
Instrument Testing

The Radio and Television laboratories of the Boston Trade High School are buzzing with the activities of electronic science. Every set examined and repaired is a challenge because each one has its own idiosyncrasies. But however different each machine may be, the basic knowledge tools of electronics are necessary for repair or construction.

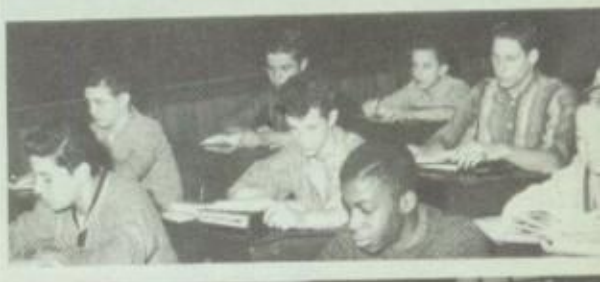
Teachers of related subjects convey a sound training in the principles and theories peculiar to radio and TV. Constantly alert to the rapid changes in the industry, these instructors bring to their students the latest operational changes in this area of communication. Practical training completes the full development of the student-apprentice, and he is then ready to step into industry as a knowledgeable worker prepared with the proper attitude and fundamental learning to expand in his trade.

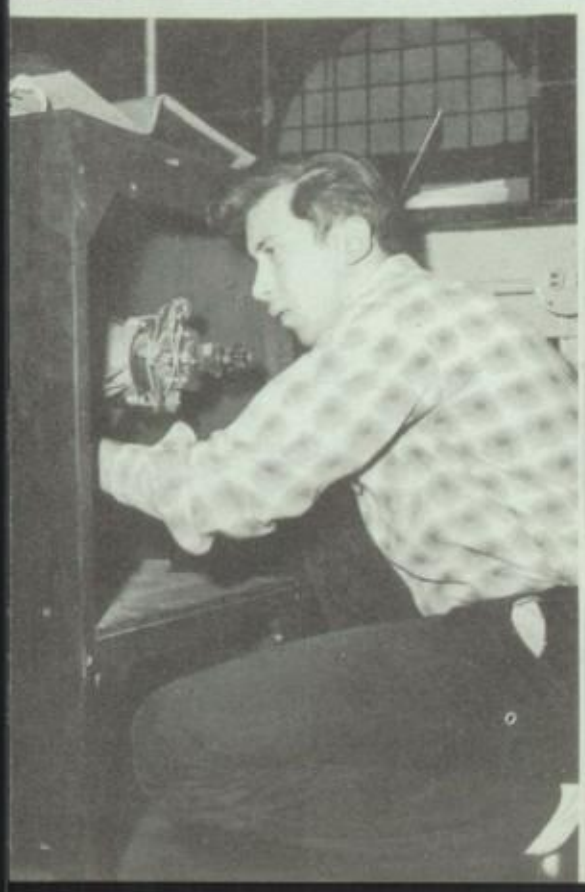
Our own amateur radio station adds to the training and experience of each boy. In addition, it contributes significantly to the continuing development and improvement of the school's stature.

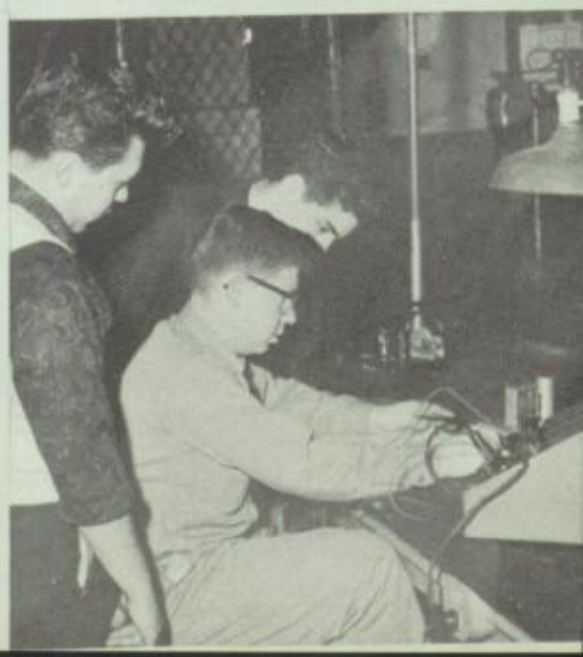
Student connecting component parts



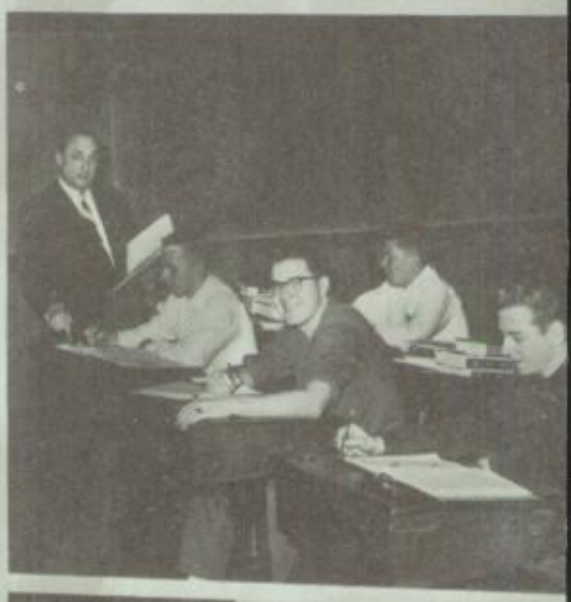
Student making picture tube adjustment

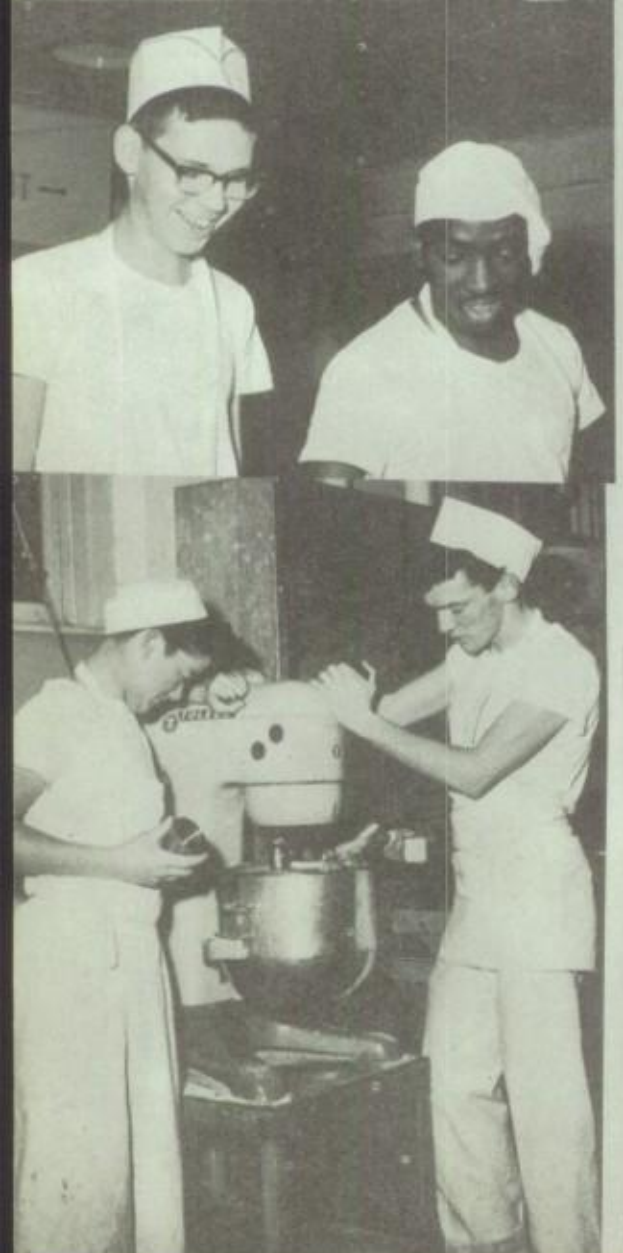




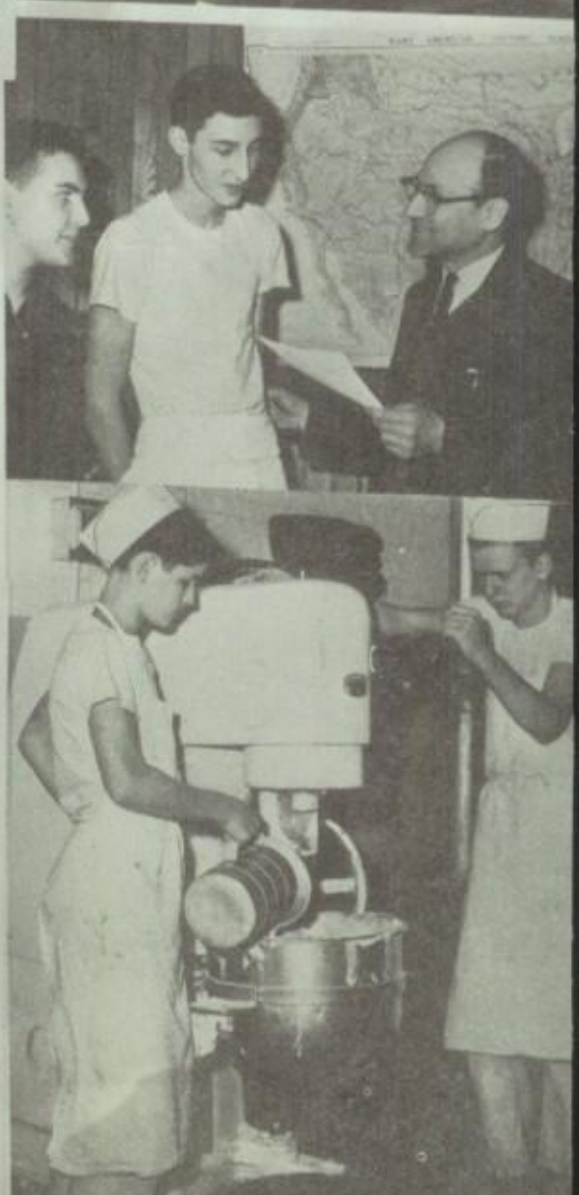


FLEX-O-MATIC



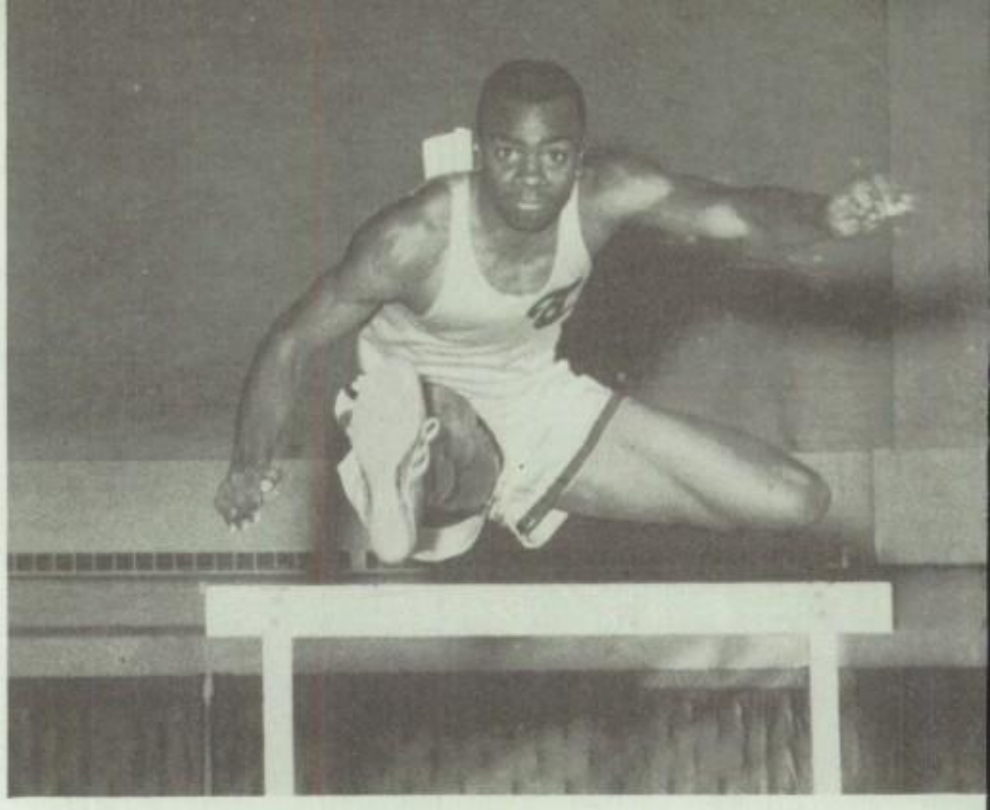


FLEX-O-MATIC



Activities

Sports



National winner Coleman takes high hurdle

Sports are an important part of the full physical and mental development of the boys at the Boston Trade High School. No matter what the season there is here at our school an athletic program for the boys suitable to their personal likings and needs. We believe that as many boys as possible should be interested and should participate. Some of the sports described in the following pages are these: Football, Baseball, Basketball, Hockey, Indoor, and Outdoor Track, and Crew.

TEAM CAPTAINS

G. F. Ryan
Faculty Coach of Athletics

CITY OF BOSTON

In Baseball, our team didn't fare too well in the won and lost column but we played some outstanding games. We had some individual stars, like Tom Kelly and Jack Stanton who were named to the City "ALL STARS". John DeVeer and Ed O'Toole also turned in many a fine game.

We remember with pride our first meeting with English High whom we defeated by a score of 9-7.

Capt. Tom Kelly and Charlie Murphy compiled very good batting averages, hitting in the vicinity of .400 plus.

With Murphy, J. Candora, R. Phaneuf, J. Vigliotte, T. Kemp and many others returning, we look forward to a good future with our baseball team.

BASEBALL

1st. Row: O'Connell, C. Cahill, Phaneuf, Candora, Lucchesi, Cannata, Collins
Murphy, Hoeckle, Long

2nd. Row: Davey, J. Cahill, Kelley, Cheer, Trainor, Clark, Mclean
Borden, Ulwick, Blocker

3rd. Row: Watts, Jackson, Moores, McCauley, White, Simmons
LaRossa, Walton, Geagan, Salipante, Sullivan

Basketball

The 1963 season was a great success. For the second time in three years B.T.H.S. captured the City Championship. It finished the season with a team record of 11 wins and 3 losses. The team's only losses were to B.C. High, Latin and Boston Technical. Incidentally this is the first time in five years that Tech has beaten us.

Credit for this championship of course goes to our coach, Mr. George Ryan, and his very capable boys under the leadership of Captain Spencer Franklin. Buddy Lewis and Franklin, by the way, were named to the City All Stars.

Other boys who gave a good account of themselves this season were J. Robinson, R. Fleishon, M. Wornum, A. Bowen, and S. Hanna.

BASKETBALL TEAM

1st row: Blocker, Storms, Kemp, Bowen, Franklin, Hanna, Fleishon, Robinson, Rolling
2nd row: Gray, Carter, Cruthid, Morris, Fringuelli, Wornum, Lewis, Little
3rd row: MacLoud, Harrison, Walton, Simpkins, O'Brien, O'Howard, Carhorale, Almeida, Long, Burke, Gaskins

Crew

With the spring a young man's fancy turns to Crew, if he is one of those stalwart individuals who appreciates a rugged sport.

Workouts are held every day on the Charles River in boats that were made here at the B.T.H.S. under the supervision of Mr. John Tragakis, the crew coach.

The crew team did fairly well this past year in races that were held twice weekly. Our team finished in a third place tie with Boston Latin School.

Team spirit was very good, and with A. Bayiates of Pb. 12 Captain, and H. Greene of Cab. 12 Co-Captain, the boys gave a good account of themselves in every race.

In the near future, with more boys participating, we hope to bring a Crew Championship to the B.T.H.S.

CREW SQUAD

1st row Adie, Bayiates, Gillis, Storello, O'Connell, DeYeso, Jones, Donlon, Gontarz, Linskey
2nd row Greene, Harnden, Sardone, Connare, Hamilton
Wisniewski, Parillo, Beattie, Kane, Tipping, Tello, Geagan, Mr. Tragakis
3rd row Winston, Jaquard, Knight, Bass, Pasquine, Reagan, Birks, Payne, Hart, Hanelos

Hockey

The hockey team this year did not have an impressive record but nevertheless their spirit and morale was good. The record for the year was 5 wins and 9 losses. With a little more depth on the team and some luck, the record for this year could have easily been reversed.

We did have some outstanding performers in the persons of Ted Hoeckle and Joe Vigliotte who were named to the All Stars.

Completing the starting lineups we might mention the contributions of Cahill, Sullivan, Phaneuf and goalie A. Romano.

HOCKEY TEAM

1st row Gedgan, Jones, Palumbo, Glynn, Guiney, Hartigan

2nd row Collins, Perro, Lescouitz, Keaveney, Salipant, Mortell, McDermott

3rd row Morrell, Vigliotti, Cahill, Heockle, Phaneuf, Sullivan, Romano

Football

The football season was disappointing because from the previous year we had lost most of our regulars through graduation. As a result, Coach Ryan had to field a team rather inexperienced especially in certain positions. The team took its lumps without complaint. They fought bitterly and courageously in every encounter even though they were not too successful.

With a little more depth and experience in certain positions, and a lot more encouragement from the student body, our team will improve in the future.

We don't like to single out the names of certain boys for praise since everyone did his part during the football season. We would like to mention the names of a few boys who are graduating this year who did a fine job. John Shea, Captain Walter Jenkins, J. Marshall, A. Bento, L. Coleman, T. Perry, and Class President Mackey played exceptionally well.

FOOTBALL TEAM

1st Row: Curtis, Range, Cornell, Perry, Marshall, Shea, Burke, Coleman, Williams, Bento, Demetri, Hart, Mackey

2nd Row: Kilbride, Bruce, Glen, Cahill, Fleishon, Fitzpatrick, Martin, Hampton, Rosato, Trainer, DeBredinis, Justice, McCloud, Copeland, Fiore

3rd Row: Coach Ryan, Blocker, Jenkins, Phillips, Fairbairn, Simkins, Borden, Sidorowitz, Davis, Ulwick, Romano, Innello, Sardone, Mahoney, Ncikerson, Wilkinson, Mortell, Grow, Collins, Armstrong, Coach Fitzgerald

Track

INDOOR TRACK

1st. Row: Mackey, Strouthers, Jenkins, Coleman, T. Perry, Marshall, Johnson, Long
2nd. Row: Armstrong, Drayton, Berckley, McGilvary, Rolland, Hicks, Burks
3rd. Row: F. Perry, Gaines, Core, O'Connor, Seams, Jackson
4th. Rasado, Thomas, Wheaton, O'Connell, Wisneiwski, Storella

The loss of Tim Johnson and Billy House, by transfer, to Rindge Tech hurt our track squad tremendously this year. We also lost some fine boys like Fred Hamlett and Otis Coleman by graduation. Nevertheless our track team, short on depth, but long on spirit and courage, took to the field.

Our team competed in the City, State, B.A.A., and New England Meets Although the team didn't do too well, nevertheless we had a star emerge in the person of Leon Coleman, a great hurdler.

Leon was named "All State" and competed in the Nationals in N.Y. where he placed second. In Madison Square Garden he was beaten by a few scant inches. He emerged in first place in the Andover meet.

Other boys on the track squad such as Tom Perry, G. Strothers, F. Hampton, and others not mentioned, were a credit to the B.T.H.S.

Gym Leaders

Physical Education in Boston Trade High School is intensive and varied. The purpose of this program is to develop the boys physically and to train them to handle themselves like gentlemen. This is achieved by having the boys play together that they may learn to show their sportmanship in any type of game. This year of 1962-63, Mr. Ryan and Mr. Fitzgerald selected boys for the formation of a new leaders' group for the purpose of developing physical fitness. During the autumn program the boys practice outdoors if the weather permits. When they are outdoors, their program consists of touch football, basketball, and soccer. Indoor activities consist of wrestling, tumbling, Swedish box, parallel bars, long and side horses, baseball, squash, and volley ball. In the spring the boys go back to regular practice of outdoor events, such as touch football, basketball, soccer, and football.

Our country strongly supports such physical and health education. In addition to the general training of all students, special instruction is given to our athletes to help them maintain good conditions in their activites. Physically fit boys are our most important product here.

GYM LEADERS

1st. Row: Borden, Occilinne, Sardone, Franklin, Curtis, Bowen, Demetri, Proto, Cuithird, Fleishon, Robinson, Rollins

1st. Row: Giglio, Wheeler, Hampton, Inzodda, Inello
2nd. Row: Young, Vigliotti, Bennett, Simmons, DeCheche

Alumni News

Although graduation comes and goes, the boy from Trade, in years to come, will feel that a part of him was left at school. Those carefree school days are relived each year at the Alumni Reunion, when graduates come together and renew old friendships.

This year saw some two hundred of the Alumni Association gather in the school cafeteria, on Thursday evening , April 25th, to enjoy good fellowship and an excellent meal.

As part of the program, the famous championship Trade basketball team played an exhibition game with a team made up of members of the Alumni Association. Later the members of the Trade team were guests at the dinner.

Mr. Edward Terrenzi and Mr. James B. McDonough were introduced as guest speakers by Daniel Healy, president of the Alumni Association. Among the honored quests were two recently retired teachers, Mr. Philip Mackey and Mr. Pasquale DeNinno.

Special tables were arranged for the newest members, those of the class of 1962. The men who graduated ten years ago, class of 1953, were at a special table, also, as was the 25 year class of 1938.

This is an annual event that each graduate looks forward to with great pleasure.

Science Fair 1963

SCIENCE FAIR CONTESTANTS
3rd Row: Laszlo William Schmal, winner, Junior Division; Gary Preman
2nd Row: Vincent Giglio, William Marino; Allen Bronstein, winner Senior Division
1st Row: John DeYeso, Leon Coleman, Ronald Ginsburg, Lawrence Sharland

Our Science Fair was held in the school library on February 28 and March 1, 1963.

Winner in the Junior Division was Laszlo William Schmal of E-9-A with his project "Many Uses of Electricity." This interesting project was sent to the City Science Fair at Latin School and won second place in the City Junior Division.

Second place in the Junior Division was won by Lawrence John Sharland of E9A for his "New-A-Tron."

In the Senior Division Vincent Giglio of AV11A was awarded first place for "Fluid Aerodynamics."

Other winners were as follows:

2nd-"Solar Cells and How They Work," by Allen Bronstein, M11A
3rd-"Cloud Chamber," Ronald Ginsburg, M11A
4th-"Telegraph Key and Sounder," John DeYeso, PR11A
5th-"Micrometer Calipers," Leon Coleman, M12B
6th-"Depth Perception," William Marino, M11A; and
7th-"Electrical Bell Principle," Gary Preman, M11A

These projects were sent to the City Fair at Latin School. Leon Coleman, who improved his project considerably, won second place in the Senior Division at Latin School. He was also selected to represent the B.T.H.S. in the State Fair at M.I.T. held May 3 and 4, 1963.

The Advertisers

In the succeeding pages you will find advertisements of subscribers who have helped you in this effort of yours, The 1963 Craftsman. They deserve your consideration. Among them you will find notices from schools of higher education in your field. Look into them. There are also advertisements from many worthy establishments in business and industry, some of which are owned or managed by graduates of your school. These too are worthy of your attention. So they have supported you, please, as far as possible, support them. At least see what they have to offer.

Why worry about your senior expenses?

JUNIORS

All expenses can be paid by selling Christmas cards and wrapping paper to relatives and friends.

EXPENSES! EXPENSES! EXPENSES!

REMEMBER

That your pictures, class ring, yearbook, and prom are just a few of the items that go with the senior year.
